ENDANGERED SPECIES BOOKMARKS

Arroyo Toad

(Bufo californicus)

California Academy of Sciences, Special Collections

Protected at Fort Hunter Liggett (California)

Habitat: Slow-flowing rivers that have shallow, gravelly pools with sandy terraces and cottonwood, oak, and willow trees.

A relatively small toad of 2 to 3 inches long.

Courtship call is a high trill that is similar to some insect calls.

A nocturnal amphibian.

Only six populations with more than a dozen adults are known.

Has glands that secrete poison, limiting natural predators to a few reptiles, birds, and mammals that can metabolize the toxins.

Listed as endangered on December 16, 1994.

SUSTAINABILITY READINESS WELL-BEING

The U.S. Army is the steward of more than 15 million acres of land across many diverse ecosystems. Because of the way the Army trains on and manages this land, these natural environments have become havens of plant and animal biodiversity. Of the approximately 1,300 plants and animals federally listed as threatened or endangered, more than 170 are found on Army lands in the United States.
