

ACQUISITION BOOKMARKS

TUAV

PEO Aviation

MISSION
Provides Brigade Combat Team, Stryker Brigade, and Armored Cavalry commanders near real-time reconnaissance, target acquisition, and battle damage assessment.

DESCRIPTION
The Tactical Unmanned Aerial Vehicle (TUAV) system configuration, fielded in platoon set, consists of four air vehicles with electro-optic/infrared imaging payloads, and two ground control stations that are shelter mounted on High Mobility Multi-purpose Wheeled Vehicles.

All weapon system programs, regardless of acquisition category, shall comply with Environment, Safety and Occupational Health (ESOH) requirements throughout their life cycle. The Army spends approximately \$1.5B per year on environmental quality (EQ) management. Approximately 75% of Army environmental costs and liability at installations come from operation and sustainment (O&S) of fielded systems. Integration of EQ considerations into the acquisition process and system design will reduce that cost and liability to Army installations and commanders.
