### Site Narrative

Range (RNG) 92 berm is located in areas that are now the Robinson Maneuver Training Center (RMTC) Cantonment area. The berm is on the east side of cantonment approximately 200 and 300 meters north of Delaware Ave. and 25 and 200 meters west of 5th St. The berm is approximately 100 meters in long and 3 meters high. The area is used by Arkansas Army National Guard (ARARNG) personnel or contractors working on behalf of the ARARNG. Research indicates Ranges RNG92 was utilized by the United States Army personnel for small arms firing between 1918 and 1944. According to a February 1944 United States Army Corps of Engineers completion report for Camp Joseph T. Robinson, the range was abandoned and set for lumber salvage. They may have been used as early as World War I (WWI), but we have found no evidence as to what years the ranges were operational. Lead projectiles have been found at the berm.

Defense Environmental Restoration Program (DERP) funding was used to complete work through the Site Inspection (SI) at this site. Non Department of Defense Non-Operational Defense Sites (NDNODS) sites moving forward with the Remedial Investigation (RI) and Feasibility Study (FS) phase are reprogrammed into Compliance-related Cleanup.

**Restoration Cleanup Strategy:** An RI/FS will be completed at this site. Once the RI/FS is completed it is assumed a soil excavation will be required.

### Site Narrative

The Range (RNG) 98 berm is in an area that is now the Robinson Maneuver Training Center (RMTC) Cantonment area. The RNG98 berm is located in the northwest part of the cantonment area next to the Army Aviation Support Facility. The berm is around 25 meters long and 2 meters high. This area is used by Arkansas Army National Guard (ARARNG) personnel or contractors working on behalf of the ARARNG. Research indicates Range RNG98 was utilized by the United States Army personnel for small arms firing between 1918 and 1944. According to a February 1944 United States Army Corps of Engineers completion report for Camp Joseph T. Robinson, the range was abandoned and set for lumber salvage. They may have been used as early as World War I (WWI), but we have found no evidence as to what years the ranges were operational. Lead projectiles have been found at the berm.

Defense Environmental Restoration Program (DERP) funding was used to complete work through the Site Inspection (SI) at this site. Non Department of Defense Non-Operational Defense Sites (NDNODS) sites moving forward with the Remedial Investigation (RI) and Feasibility Study (FS) phase are reprogrammed into Compliance-related Cleanup.

**Restoration Cleanup Strategy:** An RI/FS will be completed at this site. Once the RI/FS is completed it is assumed a soil excavation will be required.

### Site Narrative

A Preliminary Assessment (PA) was completed for Per-and polyfluoroalkyl substances (PFAS) at Camp Robinson in North Little Rock, Arkansas to assess potential PFAS release areas and exposure pathways to receptors. Camp Robinson is constructed on a parcel of land owned by the Arkansas Department of the Military and leased to the Arkansas Army National Guard. The current agreement expires in 2040. A total of six Areas of interest (AOIs) related to potential PFAS releases were identified in total (two during the PA and four additional during Site Inspection [SI] planning). Based on potential PFAS releases at these AOIs, there is potential for exposure to PFAS contamination in media at or near the facility.

A SI was completed at this site in 2021. Based on the results of the SI, further evaluation is warranted at AOI1, AOI3, AOI4, AOI5 and AOI6:

AOI 1 – Perfluorooctanoic acid (PFOA), perfluorooctane sulfonate (PFOS), perfluorobutane sulfonate (PFBS), perfluorohexane sulfonate (PFHxS), and Perfluorononanoic acid (PFNA) were detected in all seven temporary well locations at AOI 1. PFOA detections in groundwater exceeded the screening levels (SL) of 6 nanograms/liter (ng/L) in all 7 temporary well locations (maximum concentration 540 ng/L). PFOS detections in groundwater exceeded the SL of 4 ng/L in all 7 wells (maximum concentration 3,000 J+ ng/L). PFNA detections in groundwater exceeded the SL of 6 ng/L in 5 of the 7 wells (maximum concentration 770 J+ ng/L). PFHxS detections in groundwater exceeded the SL of 39 ng/L in 6 of 7 wells (maximum concentration 1,000 ng/L). PFOA, PFOS, PFHxS, PFNA and PFBS were detected in soils at AOI 1. Two detections of PFOS and one detection of PFNA in soil exceeded the associated residential SLs of 13 micrograms/kilograms (µg/kg) and 19 µg/kg, respectively.

AOI 3 – PFOA, PFOS, PFHxS, PFNA and PFBS were detected in groundwater at AOI 3. There were exceedances of the SLs for PFOS and PFOA in groundwater (maximum concentrations of 5.3 ng/L and 8.4 ng/L, respectively).

AOI 4 – PFOA, PFOS, PFHxS, PFNA and PFBS were detected in groundwater at AOI 4, with PFOS exceeding the SL of 4 ng/L in both temporary well locations (maximum concentration 36 ng/L) and PFOA exceeding the SL with a maximum concentration of 41 ng/L.

AOI 5 – PFOA, PFOS, PFHxS, PFNA and PFBS were detected in groundwater at AOI 5. PFOA, PFOS, and PFHxS detections exceeded their SLs with maximum concentrations of 12 ng/L, 23 ng/L, and 110 ng/L, respectively. Camp Robinson personnel reported a recent release of aqueous film-forming foam (AFFF) resulting in the removal of approximately 200 tons of soil from the northern portion of the building at AOI 5. PFOS exceeded the SL with a maximum concentration of 23 µg/kg.

AOI 6 – PFOA, PFOS, PFHxS, PFNA and/or PFBS were detected in all 4 well locations at AOI 6. PFOS, PFOA, and PFHxS exceeded the SLs with maximum concentrations of 120 ng/L, 14 ng/L, and 310 ng/L, respectively. PFOA, PFOS, PFHxS, and PFNA were detected in soils at AOI 6. One detection of PFOS in soil exceeded the associated residential SL (maximum concentration of 410 µg/kg).

The subject site was tracked as 2791A.1001 under the Compliance-related Cleanup (CC) program. In June 2022, this site was determined to be eligible for the Defense Environmental Restoration Program (DERP).

**Restoration/Cleanup Strategy:** A Remedial Investigation (RI)/Feasibility Study (FS) will be completed at this site. Further actions cannot be determined until after the RI/FS is complete.

## Site Narrative

In FY05 a Performance Based Acquisition (PBA) Contract was awarded for Fort Chaffee. The relative risk site evaluation (RRSE) score changed due to information gathered during an enhanced Preliminary Assessment (PA)/Site Inspection (SI). This site is included in a performance work statement (PWS) with Camp Crowder sites for the PBA.

In Fiscal Year (FY) 06, the work at the former Prisoner of War (POW) landfill, except for seeding with native grasses, was completed. The site was cleared of vegetation and lows were filled in with clean fill material. The site was graded to improve overland flow and reduce infiltration. Signs were posted and Land Use Controls (LUCs) implemented. Annual inspections will be conducted to make sure the LUCs are in place. Seeding with native grasses was completed in FY07. The land use control was finalized and implemented in 2008. Annual inspections were completed by the Installation Restoration Program (IRP) PBA contractor starting 2008 through close of the contract in 2010. Annual inspections will be conducted by the compliance staff at Fort Chaffee Maneuver Training Center to make sure the LUCs are in place indefinitely.

**Restoration/Cleanup Strategy:** The Long Term Management (LTM) phase (five-year reviews) is underway at this site.
