### Site Narrative

The former small arms range complex (RRNE000007) is located on the "State Farm" of University of Nebraska campus in North Platte, Lincoln County, Nebraska. The former small arms range complex consists of a pistol range, machine gun range, and a known distance range. Munitions observed on the former rifle range, located in six target impact pockets along the former impact berm for the rifle range, were limited to expended small arms ammunitions (i.e. lead slugs).

A Site Inspection (SI) was conducted in 2012. Soil samples were collected from the firing lines and from the target/berm area. Analytical results from the 10 surface samples showed lead at concentrations ranging from 10 J milligrams per kilogram (mg/kg) to 2,400 J mg/kg. Lead concentrations in two of the six samples collected at the target area exceeded the Nebraska residential screening level of 400 mg/kg at 1,300 J mg/kg and 2,400 J mg/kg, respectively. The SI concluded that no further actions (NFA) are required for munitions and explosives of concern (MEC). Because munitions constituents (MC) in soil samples collected from the target/berm area were detected above the Nebraska screening level for lead, this munitions response site (MRS) was recommended for a remedial investigation (RI) for MC.

Defense Environmental Restoration Program (DERP) funding was used to complete work through the Site Inspection (SI) phase at this site. Non-DoD Owned, Non-Operational Defense Sites (NDNODS) moving forward with the Remedial Investigation/Feasibility Study (RI/FS) phase are reprogrammed into Compliance-related Cleanup.

**Cleanup/Exit Strategy** An RI/FS will be completed at this site. Once the RI/FS is completed it is assumed a soil excavation will be required.

### Site Narrative

A Preliminary Assessment (PA) was completed at Grand Island Army Aviation Support Facility (AASF) #2 to assess potential per- and poly-fluoroalkyl substances (PFAS) release areas and exposure pathways to receptors. Two Areas of Interest (AOI) related to potential PFAS releases was identified at the Grand Island AASF #2 during the PA. Interviews and records (covering 2017 to present) indicate that activities may have resulted in potential PFAS releases at the AOIs identified during the PA.

A Site Inspection (SI) was conducted and the final SI report was issued in October 2023. The SI concludes that a remedial investigation (RI) is warranted at AOI 2 – TriMax™ Fire Extinguishers. At AOI 2, perfluorooctanesulfonic acid (PFOS) and perfluorohexanesulfonic acid (PFHxS) were detected in groundwater at concentrations above their respective screening levels (SLs). There were no exceedances of the relevant SLs in soil nor groundwater samples associated with AOI 1; as such, the SI recommended no further evaluation was warranted for the AOI.

The site had previously been part of the Compliance-Related Cleanup (CC) program and tracked under HQAES site number 6796A.1001. In FY23, the subject site was approved for Defense Environmental Restoration Program (DERP) funding, and the RI will proceed under DERP.

**Cleanup/Exit Strategy** An RI/Feasibility Study (FS) will be conducted at AOI 2. Future actions will be determined by the results of the RI.

### Site Narrative

A Preliminary Assessment (PA) was completed at Lincoln Army Aviation Support Facility (AASF) #1 to assess potential per- and poly-fluoroalkyl substances (PFAS) release areas and exposure pathways to receptors. One Area of Interest (AOI) related to potential PFAS releases was identified at the Lincoln AASF #1 during the PA: West Lawn Former Fire Training Area. Based on the Conceptual Site Model developed for the AOI, there is potential for receptors to be exposed to PFAS contamination in soil, groundwater, surface water, and sediment at this AOI.

A Site Inspection (SI) was conducted and the final SI report was issued in October 2023. The SI concludes that a remedial investigation (RI) is warranted at AOI 1. Perfluorooctanoic acid (PFOA), perfluorooctanesulfonic acid (PFOS), perfluorononanoic acid (PFNA) and perfluorohexanesulfonic acid (PFHxS) were detected in groundwater at concentrations above screening levels (SLs) at AOI 1 and at the upgradient facility boundary. PFOS was detected in soil at concentrations above the SL at AOI 1, and along downgradient drainage pathways.

The site had previously been part of the Compliance-Related Cleanup (CC) program and tracked under HQAES site number 4137A.1003. In FY23, the subject site was approved for Defense Environmental Restoration Program (DERP) funding, and the RI will proceed under DERP.

**Cleanup/Exit Strategy** An RI/Feasibility Study (FS) will be conducted at AOI 1. Future actions will be determined by the results of the RI.
