## EXECUTIVE SUMMARY

The objective of a Preliminary Assessment (PA) is to identify areas of potential interest (AOPIs) based on whether use, storage, or disposal of potential per- and polyfluoroalkyl substances (PFAS)-containing materials, including aqueous film-forming foam (AFFF), occurred in accordance with the *Army Guidance for Addressing Releases of Per- and Polyfluoroalkyl Substances* (U.S. Army 2018). A PA for PFAS-containing materials with a focus on perfluorooctane sulfonate (PFOS), perfluorooctanoic acid (PFOA), perfluorobutane sulfonate (PFBS), perfluorononanoic acid (PFNA), perfluorohexane sulfonate (PFHxS), and hexafluoropropylene oxide dimer acid (HFPO-DA) and its ammonium salt (“GenX” chemicals) was completed for the former Lexington-Bluegrass Army Depot (herein referred to as LBAD), to assess potential PFAS release areas and exposure pathways. The entire LBAD facility was selected for closure under the Base Realignment and Closure (BRAC) Act, and all property has been conveyed to the Commonwealth of Kentucky. LBAD is located on 780 acres of land in both Fayette and Bourbon Counties, Kentucky. The completion of this PA included the execution of the following tasks:

- Conducted a kickoff meeting with the BRAC Office and the U.S. Army Corps of Engineers (USACE) on May 19, 2021, to present all parties’ preliminary knowledge of LBAD to inform the PA and site visit.
- Reviewed available records (e.g., aerial photography, historical maps, technical reports, previous studies, investigations) from online sources (i.e., Internet-based searches), environmental investigations and/or regulatory programs (e.g., the Comprehensive Environmental response, Compensation, and Liability Act [CERCLA]), and internal U.S. Army (Army) documents from the Administrative Record. In addition, an Environmental Data Resources, Inc. (EDR) Report for LBAD and any listed sites within an up to 2-mile search distance was conducted.
- Conducted a 4-day site visit from August 30 to September 2, 2022, to identify potential sources of PFAS and gather information for developing conceptual site models (CSMs) at AOPIs.
- Interviewed individuals with historical and present-day knowledge of operations on the excess BRAC property.
- Identified AOPIs and developed preliminary CSMs for pathways of potential PFAS in soil, groundwater, surface water, and sediment.

In conducting the PA of the excess BRAC property at LBAD, nine AOPIs were identified where a potential for release of PFAS-containing materials exists resulting from Army activities conducted during the site’s operational history. AOPIs were identified at potential PFAS-release locations on the BRAC property only.

Based on the potential PFAS releases at the AOPIs, the potential for exposure to PFAS contamination in soil and groundwater exists. In addition, the potential for off-post exposure in groundwater exists, as on-post groundwater could influence drinking water sources. Given the findings of this PA, the AOPIs presented warrant further evaluation in a Site Inspection (SI).

# 1. INTRODUCTION

The U.S. Army (Army) conducted this Preliminary Assessment (PA) to investigate the potential presence of per- and polyfluoroalkyl substances (PFAS) at the former Lexington Bluegrass Army Depot (herein referred to as LBAD) in accordance with the Comprehensive Environmental Response, Compensation, and Liability Act (CERCLA, 42 United States Code [U.S.C.] §9601 et seq.); the Defense Environmental Restoration Program (DERP, 10 U.S.C. §2701 et seq.); the National Oil and Hazardous Substances Pollution Contingency Plan (NCP, 40 Code of Federal Regulations [CFR] Part 300); and guidance documents developed by the U.S. Environmental Protection Agency (USEPA) and the U.S. Department of the Army. LBAD is not on the National Priorities List, and the Army is responsible for compliance with CERCLA in accordance with Executive Order 12580, as amended.

The purpose of this PFAS PA is to identify locations that are areas of potential interest (AOPIs) on LBAD based on the use, storage, and/or disposal of potential PFAS-containing materials, in accordance with the *Army Guidance for Addressing Releases of Per- and Polyfluoroalkyl Substances* (U.S. Army 2018). The PA was conducted in general accordance with 40 CFR §300.420(b) and the USEPA *Guidance for Performing Preliminary Assessments Under CERCLA* (USEPA 1991) and the *Army Guidance for Addressing Releases of Per- and Polyfluoroalkyl Substances* (U.S. Army 2018). This report presents findings from research conducted to assess past use of PFAS-containing materials and identifies areas where these materials were stored, handled, used, or disposed of at LBAD.

The entire LBAD property was evaluated, including Army-owned property as well as property that has been previously transferred. LBAD is located approximately 10 miles east of Lexington, Kentucky, as shown in Figure 1-1.

## 1.1 PFAS BACKGROUND INFORMATION

PFAS are a group of synthetic compounds that have been manufactured and used extensively worldwide since the 1950s for a variety of purposes. PFAS are stable, man-made fluorinated organic chemicals that repel oil, grease, and water. Common industrial uses of PFAS include paints, varnishes, sealants, hydraulic fluid, surfactants, and firefighting foams. PFAS include both per- and polyfluorinated compounds. Perfluorinated compounds, such as perfluorooctane sulfonate (PFOS), perfluorooctanoic acid (PFOA), perfluorobutanesulfonic acid (PFBS), perfluorononanoic acid (PFNA), perfluorohexane sulfonate (PFHxS), and hexafluoropropylene oxide dimer acid (HFPO-DA or Gen X) are a subset of PFAS with completely fluorinated carbon chains, while polyfluorinated compounds have at least one carbon chain atom that is not fully fluorinated. These six PFAS together, and for the purposes of this PA, are referred to in this report as “Target PFAS.”

LBAD was evaluated for all potential use, storage, and/or disposal of PFAS-containing materials. There are a variety of PFAS-containing materials used in relation to current and historical Army operations. However, the use, storage, and/or disposal of is the most common potential source of PFAS at U.S. Department of Defense (DoD) facilities. As such, this section is organized to summarize the aqueous film-forming foam (AFFF)-related sources first, and all remaining potential PFAS-containing materials in the subsequent paragraph. AFFF is used as a firefighting agent to suppress petroleum hydrocarbon fires and vapors. Firefighting foams like AFFF were developed in the 1960s (ITRC 2020a), but AFFF did not see widespread DoD use until the early 1970s. Older fire training facilities often were unlined and not constructed to prevent infiltration of firefighting foams and combustion products leaching into the subsurface. Large quantities of AFFF may have been released into the environment as a result of fire training exercises, fire responses, fire suppression system activations, and tank and pipeline leaks/spills.

Other potential PFAS sources considered include installation storage warehouses, some pesticide use, automobile maintenance shops, photographic processing facilities, laundry/waterproofing facilities, car washes, stormwater or sanitary sewer components, and biosolid application areas.

Many PFAS are highly soluble in water and have low volatility due to their ionic nature. The specific gravity/relative density for PFOS and PFOA is 1.8 (ITRC 2020b). Long-chain perfluorinated compounds have low vapor pressure and are expected to persist in aquatic environments. These compounds do not readily degrade by most natural processes. They are thermally, chemically, and biologically stable, and are resistant to biodegradation, atmospheric photooxidation, direct photolysis, and hydrolysis. The structure of these compounds increases their resistance to degradation; the carbon-fluorine bond is one of the strongest in nature, and the fluorine atoms shield the carbon backbone.

When PFAS are released to the environment, they can readily migrate into soil, groundwater, surface water, and sediment. Once in the environment, the compounds are persistent and may continue to migrate through airborne transport, surface water, groundwater, and/or biologic uptake. The amount of PFAS entering the environment depends on the type and amount of the PFAS material that may have been released, where and when it was used, the type of soil, and other factors. If private or public wells are located nearby, they potentially could be affected by PFAS. Similarly, surface water features may be impacted and may convey PFAS to downgradient receptors.

Of the thousands of PFAS, some are considered precursor compounds (typically polyfluoroalkyl substances). Precursor compounds can abiotically or biotically transform into PFOS and PFOA. PFOS and PFOA are referred to as terminal PFAS, meaning no further degradation products will form from them (ITRC 2020c).

## **1.2 PURPOSE AND OBJECTIVES**

The purpose of a PA under the NCP is to 1) eliminate from further consideration those sites that pose no threat to public health or the environment; 2) determine if any potential need for removal action exists; 3) set priorities for Site Inspections (SIs); and 4) gather existing data to facilitate evaluation for the release pursuant to the Hazard Ranking System, if warranted (40 CFR §300.420(b)(1)).

The primary objective of the PA is to identify locations at LBAD where use, storage, or disposal of PFAS-containing materials resulted in a potential release of PFAS to the environment and conduct an initial assessment of possible migration pathways of potential contamination. This PA also includes development of a preliminary conceptual site model (CSM) for AOPIs related to PFAS.

## **1.3 PFAS REGULATORY OVERVIEW AND SCREENING CRITERIA**

In May 2016, USEPA issued lifetime health advisories (LHAs) for PFOA and PFOS under the Safe Drinking Water Act (SDWA). To provide Americans, including the most sensitive populations, with a margin of protection from a lifetime of exposure to PFOS and PFOA in drinking water, USEPA established a health advisory (HA) level for PFOS and PFOA (individually or combined) of 70 ng/L (USEPA 2016).

In October 2019, the Office of the Secretary of Defense (OSD) issued guidance on investigation PFOS, PFOA, and PFBS at DoD restoration sites. The OSD guidance provided risk screening levels for PFOS, PFOA, and PFBS in groundwater, tap water, and soil, based on the USEPA regional screening level (RSL) calculator for residential and industrial reuse and using the oral reference dose (RfD) of 2E-05 mg/kg-day. These screening levels are used during an SI to determine if further investigation in a Remedial Investigation (RI) is warranted.

In April 2021, USEPA issued an updated toxicity assessment for PFBS. USEPA developed chronic (0.0003 mg/kg-day) and subchronic (0.001 mg/kg-day) oral RfDs for PFBS as part of USEPA's toxicity

assessment. The RSL for PFBS was previously calculated using the RfD of 0.02 mg/kg day. New toxicity values resulted in revisions to the RSLs for PFBS in May 2021 (USEPA 2021a).

In September 2021, OSD issued a revision to *Investigating Per- and Polyfluoroalkyl Substances within the Department of Defense Cleanup Program* (DoD 2021). The revised memorandum accounts for the updated PFBS screening levels attributable to USEPA’s reassessment of PFBS toxicity in 2021. Based on USEPA research, the RSLs for PFOS and PFOA are calculated using an RfD of 2E-05 mg/kg-day. The RSL for PFBS is calculated using an RfD of 3E-04 mg/kg-day. When multiple PFAS are encountered at a site, a 0.1 factor is applied to the screening level when it is based on noncarcinogenic endpoints.

In May 2022, based on continued evaluation of Target PFAS by the Agency for Toxic Substances and Disease Registry and the USEPA Office of Water, USEPA provided new screening levels for PFOA, PFOS, PFNA, PFHxS, and HFPO-DA.

In July 2022, OSD issued a policy memorandum adopting these new screening levels to be used during the SI phase to determine whether further investigation in an RI is warranted. The screening levels for Target PFAS are listed in Table 1-1. This revised guidance is in effect as of July 2022 and is applicable to investigating PFOS, PFOA, PFBS, PFNA, PFHxS, and HFPO-DA at DoD restoration sites, including BRAC sites (DoD 2022). Currently, no legally enforceable Federal standards exist for PFAS in groundwater, surface water, soil, or sediment.

**Table 1-1. Project Action Limits from the 2022 OSD Memorandum**

<b>Chemical</b>	<b>Residential Tap Water HQ = 0.1 (ng/L or ppt)</b>	<b>Residential Soil HQ = 0.1 (µg/kg or ppb)</b>
HFPO-DA (GenX)	6	23
PFBS	601	1,900
PFHxS	39	130
PFNA	6	19
PFOA	6	19
PFOS	4	13

Note: The residential tap water PALs are used to evaluate groundwater and surface water data. The residential soil PALs are used to evaluate soil and sediment data.

The Army’s strategy is to continue to assess and investigate potential releases and implement necessary response actions in accordance with CERCLA to ensure that no human health-based exposures are above the CERCLA risk-based values in drinking water. Therefore, sites where human exposure to contaminated drinking water exists will be addressed first and as quickly as possible to eliminate the exposure and then will be subsequently prioritized and sequenced to conduct the investigations and response actions necessary to characterize and, if necessary, remediate the source of PFAS contamination (U.S. Army 2018).

#### **1.4 PA METHODOLOGY**

The PA for LBAD included a site visit, aerial photographic analysis, records review, and interviews that were conducted in accordance with the methods detailed in the Programmatic PA Work Plan (Leidos 2021). The Programmatic PA Work Plan outlines the approach and methodology for conducting the PFAS PA. As detailed in the Work Plan, the PA activities focused on ascertaining and documenting the following information regarding PFAS history and use, storage, or disposal at LBAD:

- On-post fire training activities
- Use of PFAS-based AFFF in fire suppression systems or other systems
- AFFF stored, used, and/or disposed of at buildings and crash sites
- Activities or use of materials that are likely to contain PFAS, such as metal plating operations

- Wastewater treatment plants (WWTPs) and landfills that may have received PFAS-containing materials
- Studies conducted to assess environmental impacts at the facility
- Potential PFAS use at parcels post transfer
- Potential off-post sources that may impact LBAD.

The data gathered during PA activities are summarized in Section 3.

## 1.5 REPORT ORGANIZATION

The contents of this PA Report are summarized below:

- **Section 2. Site Background**—This section presents site-specific information related to site operational history and discusses the environmental setting. Demographics, land use, topography, geology, hydrogeology, hydrology, groundwater, potable wells, ecological receptors, and climate are described.
- **Section 3. PA Analysis**—This section provides observations and results from the PA site visit, aerial photographic analysis, records review, and interviews.
- **Section 4. Summary of PA Data**—This section provides an overview of the data collected during the PA for the different potential PFAS sources.
- **Sections 5. Summary of PA Results**—This section synthesizes all of the data gathered from the PA activities and determines whether each area evaluated during the PA is an AOPI or was not retained as an AOPI.
- **Section 6. Conclusions**—This section presents conclusions of the PA.
- **Section 7. References**—This section lists the references that were used in the preparation of this report.
- **Appendices**—Appendices A through F include data from field activities or related assessments:
  - Appendix A. Final LBAD Installation Kickoff Meeting Minutes
  - Appendix B. Documents/Sources Reviewed During PA
  - Appendix C. Aerial Photographs
  - Appendix D. Site Visit Photographs
  - Appendix E. Questionnaire Responses and Interview Notes
  - Appendix F. Environmental Data Resources, Inc. (EDR) Report.

## 2. SITE BACKGROUND

### 2.1 SITE LOCATION

LBAD is located at 5749 Briar Hill Road, Lexington, Kentucky, 40516 in both Fayette and Bourbon Counties (Figure 1-1). While in operation, LBAD occupied approximately 780 acres and is 10 miles northeast of Lexington and adjacent to the village of Avon. It is bounded on the east by Ware Road, on the south by the L&N Railroad, on the west by Briar Hill Road, and on the north by farmland. Figure 2-1 depicts the LBAD site features.

### 2.2 SITE OPERATIONAL HISTORY

LBAD was originally established in June 1941 as a signal depot and used for the storage and overhaul of communications equipment. By the end of World War II, an administration building, eight warehouses, a motor pool, a power plant, and 40 wood-framed buildings had been constructed. In the 1950s, an industrial maintenance shop, two warehouses, and seven housing units were constructed. Through the 1960s and 1970s, an additional 10 buildings were constructed, including an electronics and communications building, a security equipment maintenance facility, and seven warehouses. By 1995, approximately 113 buildings were present at LBAD, and in addition to communications equipment storage and overhaul services, it was a major storage depot for supplies such as dry cell batteries, clothing and textiles, tungsten, tin, quartz crystals, and crude rubber (Commonwealth of Kentucky 1995). Historical site activities included electroplating, stripping, cleaning, and coating of equipment; photographic processing; vehicle maintenance; printing; and fuel storage (Earth Tech 1994).

In 1988, the BRAC Commission recommended closure of LBAD. On August 15, 1994, the facility was leased to the Commonwealth of Kentucky and renamed the Bluegrass Station with KDMA as the caretaker.

Due to past waste disposal and industrial operations at LBAD, groundwater sampling and site inspections are currently conducted as part of a long-term monitoring (LTM) plan at two waste management units, including 1) the Southwest Waste Management Area (i.e., Old Landfill, Industrial/Sanitary Waste Landfill, Industrial Waste Treatment Plant, Industrial Waste Lagoons, and Building 27); and 2) the Northeast Waste Management Area (i.e., New Landfill). Volatile organic compounds (VOCs) and metals are monitored in groundwater along with landfill inspections and surface water monitoring every 5 years, with the next event occurring in 2025 (SERES 2021).

### 2.3 DEMOGRAPHICS, PROPERTY TRANSFER, AND LAND USE

LBAD is bounded on the east by Ware Road, on the south by the L&N Railroad, on the west by Briar Hill Road, and on the north by farmland. The facility currently provides logistical and operational support to a number of Government and private industry tenants. Prior to the construction of the LBAD facility, the property and surrounding area were primarily used for agricultural purposes.

The surrounding area is primarily rural, with some industrial activities along the southwestern boundary of the property. The 2020 U.S. census reported population for Fayette and Bourbon Counties was 322,570 and 20,252 people, respectively (U.S. Census Bureau 2021). Fayette County includes the metropolitan area of Lexington.

The transfer of parcels to the Commonwealth began in September 1995, with 22 buildings and 1 parking lot. An additional 78 structures, or portions thereof, and utility lines in industrial portions of the facility were transferred in November 1997 (Jacobs 2003). Approximately 211 acres designated as recreational, which included the golf course and swimming pool, were transferred to the National Park Service in 1995 and then to the Department of Homeland Security in 2008. In 2013, this parcel was transferred to the

Commonwealth under the management of KDMA and leased to the Department of Homeland Security. All portions of LBAD are now owned by the Commonwealth.

A facility-wide deed restriction for use of groundwater was implemented in 2006 due to past pesticide use and industrial and landfill operations (USAMC 2006). Land use restrictions were also implemented in 2006 for three landfill areas, the pesticide storage Building 303 (located in the former golf course parcel), and the remaining portion of the LBAD referred to as industrial. The land use restrictions require that no residential use be permitted at LBAD, the landfill areas must remain undisturbed, and recreational use is only permitted in the 211 acres of the former golf course parcel (excluding Building 303).

## **2.4 TOPOGRAPHY**

LBAD is at an average elevation of approximately 958 feet above mean sea level (amsl) and is moderately sloped (EDR 2021). Elevations range from a highpoint of 1,010 feet amsl to the northeast of LBAD to 930 feet amsl to the southwest. The ground slope at the facility ranges from 1 to 3 percent with localized slopes as great as 5 percent. A northwest to southeast ridge runs through the facility (Jacobs 2003). The terrain is predominantly clear with hard surfaces, meadow, and some wooded areas. The surface topography at LBAD is presented in Figure 2-1.

## **2.5 GEOLOGY**

LBAD is underlain by flat-lying rocks of Ordovician age, consisting primarily of alternating limestone and shale beds of the Lexington Limestone. Locally, the Lexington Limestone includes four members, from the top down: the Upper Tongue of the Tanglewood Limestone, the Millersburg Limestone, the Tanglewood Member, and the Grier Limestone Member. Each member is composed of interbedded shale and limestone of different proportions. The Upper Tongue of the Tanglewood Limestone is limited to the northern part of the facility and exposed at higher elevations where it may be capped by the remnants of the Clays Ferry Formation. The Millersburg Limestone is approximately 60 feet thick and underlies the majority of the facility. The Tanglewood is 30 to 35 feet thick where fully covered by the Millersburg Limestone. The Grier Limestone is the only member not exposed at the surface of LBAD. Investigations at the facility have identified the top of the Grier Limestone at depths ranging from 50 to 100 feet; however, its lower extent has not been investigated (Metcalf & Eddy 1995). Historical water supply wells at the facility reached as far as 151 feet and were set within the Grier Limestone. Bedrock is generally encountered between 4 and 8 feet below ground surface (bgs) at the facility.

Soil information obtained from the Natural Resources Conservation Service (NRCS) web soil survey indicates soils at LBAD are generally divided between a grouping of the Bluegrass, Maury, Lowell, Sandview, and Faywood silt loams in the northeast and either made or urban land in the southwest. Soils are moderately to well drained (NRCS 2021).

## **2.6 HYDROGEOLOGY**

LBAD is located in the east-central part of the Inner Bluegrass Karst Region, which is characterized by sinkholes and underground drainage caused by dissolution of limestone rock. A 1995 groundwater investigation report (Metcalf & Eddy 1995) indicates the hydrogeologic setting includes three aquifer zones, each of which is impacted by the development of karst features. The three hydrogeologic zones include top of rock flow, a highly transmissive zone within the Tanglewood Member, and a more highly developed transmissive zone within both the Tanglewood Member and the underlying Grier Member.

A series of shallow, intermediate, and deep wells have been installed at the facility roughly targeting the three zones described above. Groundwater is encountered at varying elevations across the facility, ranging from above 990 feet elevation in zone 1, 990 to 940 feet elevation in zone 2 and below 940 feet elevation in zone 3. Wells located within topographic depressions and at lower elevations were found to be more

productive than wells at higher elevations. Wells located in the northeastern area of the facility were drilled much deeper than the rest of the facility to encounter water.

The groundwater flow direction generally follows the surface topography, with greater gradients present in topographic highs then flattening in topographic lows. A hydrogeologic divide exists in the northeastern portion of the facility where both groundwater and surface water on the northern side flows to the north to Hutchinson Creek and water on the southern side of the divide flows south to a tributary of Elkhorn Creek. Most of the groundwater flow at LBAD is to the south with gradients that flatten to as low as 0.004 feet per foot as it approaches the tributary of Elkhorn Creek (Metcalf & Eddy 1995). A downward vertical gradient between zones appears throughout most of the facility with a difference of as much as 56 feet between deep and shallow wells. A dye tracer study performed near the industrial/sanitary waste landfill suggests that groundwater flow is slow and characteristic of fracture or granular flow rather than conduit flow, which is typical of karst aquifers (Metcalf & Eddy 1995).

## **2.7 SURFACE WATER HYDROLOGY**

The surface drainage system of the facility is composed of two ponds, several intermittent streams, and drainage ditches. Historically, two Industrial Waste Lagoons were also located on the facility; however, they were removed in 1996, and a rip-rap lined channel was constructed to collect and route stormwater drainage over the former waste lagoon area.

Surface drainage from the north-central and northwestern portions of the facility flows into an unnamed drainage channel that runs along the inside of the western boundary adjacent to Ware Road and ultimately discharges to Elkhorn Creek, approximately 1,000 feet south of the facility border. Drainage from the central and eastern portions of the facility flows through a stormwater drainage system that exits the facility at an outfall located along the southern facility edge. The discharged stormwater flows parallel to the southern property boundary and railroad tracks and combines with flow from the north-central and northwestern facility discharge to Elkhorn Creek. The remaining portions of the facility drain northeastwardly into Hutchinson Creek (Jacobs 2003).

Elkhorn Creek is the nearest surface water body and is located approximately 1,000 feet to the south of LBAD. Surface water from LBAD flows to an unnamed drainageway along the west of LBAD, which then discharges to Elkhorn Creek. Tributaries feeding Hutchinson Creek are approximately a quarter mile to the northeast of LBAD. Numerous small wetland areas are located within or near the facility boundary. The facility does not have any flood-prone areas (EDR 2021). The surface water features at LBAD are presented in Figure 2-1.

## **2.8 WATER USAGE**

Seven water supply wells existed at the facility, of which WSW-01, WSW-02, and WSW-03 were used for the potable water supply. The water supply was later supplemented by water purchased from the city of Lexington (Ebasco 1990). The seven supply wells were reportedly set within the Tanglewood Limestone member and were capable of producing 150 to 200 gallons per minute. Six supply wells were abandoned in 1999 according to Kentucky Geological Survey (KGS) records (KGS 2021), and WSW-08 is presently used solely to monitor groundwater quality. Kentucky-American Water Company (KAW) currently supplies all water to LBAD and most of the surrounding area via intakes located along the Kentucky River and Jacobsen Reservoir (KAW 2020). A facility-wide deed restriction for use of groundwater was implemented in 2006 due to past pesticide use and industrial and landfill operations (USAMC 2006).

An EDR report includes search results from a variety of environmental, state, city, and other publicly available databases for a referenced property. An EDR report was generated for LBAD, which identified 137 well records located within 1 mile of LBAD, most of which are monitoring wells or plugged monitoring wells. Data in the EDR report were verified using KGS's Water Well and Spring Interactive Map (KGS 2021) maintained by the Kentucky Groundwater Data Repository. The repository data were also used

to increase the search distance to a 4-mile radius, within which 387 records were retrieved. Data maintained in the repository are assigned unique Assembled Kentucky Ground Water Database (AKGWA) record numbers and may include information for monitoring wells, water wells, and springs gathered by various state, Federal, and academic institutions. Figure 2-2 displays the locations of the water supply well information, excluding groundwater monitoring wells. AKGWA records contained three domestic, eight agricultural, and two industrial well records within 1 mile of LBAD, and include the following:

- **AKGWA 00006078**—An installation record for a 148-foot-deep industrial well installed on June 24, 1988, and owned by Prestress Services of Kentucky, Inc. and located 520 feet south-southeast of and downgradient from LBAD.
- **AKGWA 00029700**—A 1993 inspection record, including a sample collected from the industrial well owned by Prestress Services of Kentucky, Inc. and located 480 feet south-southeast of and downgradient from LBAD.
- **AKGWA 50002072**—The laboratory results for a 1985 bacterial pathogens test collected from a 78.7-foot-deep domestic well located 650 feet north and upgradient of LBAD. No additional information was provided in the database.
- **AKGWA 50001026**—The record of a 78.7-foot-deep domestic well located 1,370 feet to the north-northwest and side-gradient of LBAD. No additional information was provided in the database.
- **AKGWA 50002241**—The record of a domestic well located 3,200 feet north and upgradient of LBAD. No additional information was provided in the database.
- **AKGWA 4027, 4038, 4039, and 4040**—These four wells are used for agricultural purposes and were owned by the Georgia Vegetable Co Farm when installed in 1987. The total depths of these wells range from 125 to 1,107 feet bgs and are located between 2,760 and 5,000 feet to the east and side-gradient of LBAD.
- **AKGWA 53407, 53417, 65837, and 69161**—These four wells are used for agricultural purposes and owned by private individuals. The total depths of these wells range from 240 to 300 feet bgs and are located between 2,890 and 3,300 feet to the southwest of and downgradient from LBAD.

The remaining records retrieved between a 1- and 4-mile radius of LBAD described 20 domestic, 1 commercial, 32 agricultural, and 7 records with an unknown use.

## 2.9 ECOLOGICAL PROFILE

LBAD consisted of approximately 780 acres when in operation. The southwestern portion of LBAD is heavily developed. The northern and eastern portions of LBAD are less developed and more open fields. LBAD was largely cleared of trees for the development of a golf course and areas in which military exercises could be conducted (USAEC 1994). The habitat is predominantly mowed fields with a few clusters of native and ornamental trees near the administrative and industrial areas in the southeastern portion of LBAD, and along the intermittent stream north of the Creech Army Airfield Heliport and on the western boundary. The vegetation is predominantly grasses (primarily Kentucky bluegrass [*Poa pratensis*]). Abundant tree species include white ash (*Fraxinus americana*), hickory (*Carya* spp.), maple (*Acer* spp.), sycamore (*Platanus occidentalis*), and black locust (*Robinia pseudoacacis*) (U.S. Army 1994).

The aquatic environment at LBAD consist of small intermittent streams and ditches, two Industrial Waste Lagoons, and two man-made ponds (Lake Elder and Golf Course Lake). The main intermittent stream is a channelized unnamed tributary of the Elkhorn Creek, which runs along the southwestern edge of LBAD (USAEC 1994). The National Wetlands Inventory (NWI) indicates the ponds are man-made, permanently

flooded freshwater ponds. The Industrial Waste Lagoons include both freshwater pond and emergent wetland habitat (NWI 2023).

Wildlife at LBAD includes those species that prefer old growth and edge habitat and are common to central Kentucky. Eastern cottontail rabbit (*Sylvilagus floridanus*), fox squirrel (*Sciurus niger*), grey squirrel (*Sciurus carolinensis*), and groundhog (*Marmota monax*) are several of the species known to occur at the site. Bobwhite quail (*Colinus virginianus*) may be found in moderate numbers (U.S. Army 1994).

The U.S. Fish and Wildlife Service (USFWS) Environmental Conservation Online System Information for Planning and Consultation (IPaC) tool identified four federally listed threatened and endangered (T&E) bat species, three clam species, and one flowering plant species as potentially occurring on or near LBAD. These species include the gray bat (*Myotis grisescens*), Indiana bat (*Myotis sodalis*), northern long-eared bat (*Myotis septentrionalis*), Virginia big-eared bat (*Corynorhinus townsendii virginianus*), clubshell (*Pleurobema clava*), fanshell (*Cyprogenia stegaria*), rabbitsfoot (*Quadrula cylindrica cylindrica*), and Short's bladderpod (*Physaria globose*). The T&E candidate species, the monarch butterfly (*Danaus plexippus*), was also identified by IPaC as potentially occurring at LBAD (USFWS 2023). The potential for these T&E and candidate species to occur does not mean they are present at LBAD. No federally listed T&E species are known to be occur at LBAD (Earth Tech 1995).

Thirteen migratory birds of particular concern are identified by the IPaC tool as potentially occurring on or near LBAD. These birds include species such as the bald eagle (*Haliaeetus leucocephalus*), black-billed cuckoo (*Coccyzus erythrophthalmus*), red-headed woodpecker (*Melanerpes erythrocephalus*), and lesser yellowlegs (*Tringa flavipes*) (USFWS 2023).

## **2.10 CLIMATE**

The average temperature at LBAD is 54.7°F, which is slightly lower than the Kentucky average temperature of 55.6°F and similar to the national average temperature of 54.5°F. The annual rainfall amount is 44.27 inches, with 78.89 days of 0.1 inch or more of precipitation. The annual snowfall amount is 6.36 inches with 8.06 days of 1 inch or more of snow. Average wind speed for the area is 16.82 miles per hour (USA.com 2021).

### 3. PA ANALYSIS

The primary components of the PA are records reviews, analysis of aerial photographs, a site visit, and interviews. The following sections summarize the methods used and activities conducted for the LBAD PA. The references to “on-post” refer to property that has been owned by the Army. Any references to “off-post” refer to areas that have never been owned by the Army.

#### 3.1 RECORDS REVIEW

Prior to the records review, site visit, and interviews, a kickoff meeting was held between the BRAC Environmental Program, the U.S. Army Corps of Engineers (USACE), and Leidos on May 19, 2021. The purpose of the kickoff meeting was to present all parties’ preliminary knowledge of LBAD to inform the PA and site visit. The final kickoff meeting minutes are presented in Appendix A.

Preliminary research was conducted prior to the site visit to determine if any of the following activities were conducted at LBAD, which may indicate whether use, storage or disposal of PFAS-containing materials occurred during operations at LBAD:

- On-post fire training
- Use of PFAS-based AFFF in fire suppression systems or other systems
- AFFF used, stored, or disposed of at buildings and emergency response sites
- Materials used that are likely to contain PFAS
- Studies conducted to assess the environmental impacts of PFAS
- Review of potential off-post sources.

The records review included a combination of Internet-based searches and review of aerial photographs, historical maps, technical reports, previous studies, and available investigation reports. In addition, an EDR search of state and Federal environmental databases for LBAD and any listed sites within a 1-mile search distance was conducted (EDR 2021).

The records review also evaluated available environmental investigations conducted under CERCLA and Resource Conservation and Recovery Act (RCRA) regulatory programs. In addition, the PA team reviewed internal Army documents available in the Administrative Record managed by KDMA at LBAD, which included inspection reports, regulatory correspondence, Installation maps, and a Community Environmental Response Facilitation Act (CERFA) report. Table 3-1 lists the documents reviewed that are relevant to the evaluation of AOPs in this PA. A complete list of documents reviewed is included in Appendix B.

**Table 3-1. Summary of Relevant Records Reviewed**

<b>Document Title</b>	<b>Author</b>	<b>Date</b>	<b>Relevance</b>
<i>Enhanced Preliminary Assessment</i>	Ebasco	March 1990	Provides information for AOPs
<i>Spill Prevention Control and Countermeasures Plan</i>	Ogden Environmental and Energy Services Company	April 1993	Provides information for AOPs
<i>Community Environmental Response Facilitation Act Report</i>	Earth Tech	April 1994	Provides information for AOPs, regulatory background
<i>RCRA Facility Investigation Report</i>	Metcalf & Eddy	April 1994	Provides information for AOPs, physical setting (i.e., topography, geology, hydrogeology, surface water hydrology)

**Table 3-1. Summary of Relevant Records Reviewed (Continued)**

<b>Document Title</b>	<b>Author</b>	<b>Date</b>	<b>Relevance</b>
<i>Groundwater Investigation Report Phase I</i>	Metcalf & Eddy	September 1995	Provides geology, hydrology, and surface water hydrology
<i>Reuse Plan</i>	Commonwealth of Kentucky	February 1995	Provides information for AOPIs, facility use and transfer details
<i>Site-Specific Environmental Baseline Survey</i>	USAEC	March 1995	Provides information for AOPIs, physical setting (i.e., topography, geology, hydrogeology, surface water hydrology)
<i>Phase II RCRA Facility Investigation Report/Corrective Measures Study</i>	Jacobs	December 2003	Provides information for AOPIs, regulatory background
<i>Environmental Covenant</i>	USAMC	September 2006	Land and groundwater use restrictions
<i>Endangered Species, Find Endangered Species</i>	USFWS	Accessed August 3, 2021	Ecological profile information
<i>Fayette County, Kentucky Weather</i>	USA.com	Accessed August 3, 2021	Climate information
<i>Fayette and Bourbon County, Kentucky Census Data</i>	U.S. Census Bureau	Accessed September 8, 2021	Demographics information

Information gathered during the records reviews helped identify data gaps and enabled elimination of several areas based on their historical use. Data gaps associated with facility operations; PFAS-containing material use, storage, or disposal; and current exposure receptors at LBAD contributed to a conservative approach for identifying AOPIs. However, areas with little potential to result in a PFAS release, such as residential buildings, hospitals, cafeterias, and recreational areas, were eliminated from further evaluation early in the PA process.

Areas identified to have potentially used, stored or disposed of, or had recorded the potential for a release of PFAS-containing materials, including AFFF, were further evaluated.

### **3.2 AERIAL PHOTOGRAPHIC ANALYSIS**

The PA included review of seven historical aerial photographs provided by EDR spanning from 1949 through 2016. Eight additional aerial photographs from 1950 to 2014 available from [historicaerials.com](http://historicaerials.com) were also reviewed. The aerial photographs were analyzed to identify potential activities or developments that may suggest the potential use, storage or disposal of PFAS-containing materials, including AFFF (e.g., evidence of fire training activities, such as fire pits or burn scars). Analysis of the historical aerial photographs show several landfill areas with visibly dark soil potentially indicative of burn and/or burial activities conducted at LBAD. Aerial photographs are included in Appendix C. The aerial photographic analysis is summarized as follows:

- 1949, 1950, and 1956 – Substantial infrastructure is visible in the southern portion of LBAD, including multiple structures of various sizes from small barracks type buildings to large warehouses. A rail line enters LBAD from the southeast and heads west by several branches. An area of disturbed ground is visible along the western LBAD property line near the old landfill. In the 1950 aerial photograph, an area of dark-colored ground is in the vicinity of the industrial/sanitary landfill, which is more visibly disturbed in 1956. Between 1950 and 1956, some structures are removed and/or added; however, the general layout remains the same. The

northeastern part of LBAD is predominantly meadow with sparse small structures. The area surrounding LBAD appears to be primarily farmland, with smaller residence style structures.

- 1960 and 1965 – A runway is constructed in the central part of LBAD and aircraft are seen parked outside the two hangars (Buildings A and B). Operations at the old landfill and the industrial/sanitary landfill are prominent. Recreational use (golfing) of the eastern portion of the facility is apparent.
- 1983, 1984, and 1993 – Two lagoons are prominent in the industrialized area of LBAD, and two small ponds are visible in the eastern recreational area. The old landfill, as well as some parts of the industrial/solid waste landfill, appear to be covered with vegetation. Disturbed ground is present to the north-northeast of the runway near the new landfill. The former runway area appears to be covered with vegetation and a smaller helicopter-type landing pad is visible to the northeast of Building B.
- 2004, 2006, 2008, 2010, 2012, 2014, and 2016 – The runway is visible but covered with vegetation in the 2004 and 2006 aerial photographs; however, it is seen reconstructed in a shorter length with two new helicopter pads at either end in the 2008 photograph. Removal of some of the rail spurs from the interior of LBAD is apparent by 2008. Vehicle and material storage occupies a substantial portion of the northern portion of LBAD between 2010 and 2012 and again in 2014 and 2016. During this period, several smaller buildings at LBAD are removed and replaced.

### **3.3 PA SITE VISIT**

Between August 30 and September 2, 2021, the PA team conducted the PA site visit. The site visit was conducted on foot and included visual inspection of all readily accessible areas at LBAD to identify potential sources of PFAS and gather information for developing CSMs at AOPs. In addition, access routes were assessed in consideration of SI sampling at AOPs. Appendix D contains photographs from the PA site visit. Photography was limited during the visit due to security restrictions.

Prior to the site visit, the PA team corresponded with KDMA to request historical documents, site knowledge, and information for potential interviewees. KDMA provided access to on-post records and security escorts for areas of the facility requiring restricted tenant access.

### **3.4 SUMMARY OF INTERVIEWS**

Prior to the site visit, a PFAS PA Questionnaire was developed and distributed for gathering information related to PFAS usage at LBAD from key personnel. The Environmental Coordinator for KDMA responded to the questionnaire, and responses are presented in Appendix E. The primary goal of the questionnaire was to identify whether PFAS-containing materials, including AFFF, were used on-post, where they were used, how much was used, how much remains, and whether any releases may have occurred. Due to the length of time that LBAD has been closed under BRAC, few personnel with pertinent site knowledge were available to complete the questionnaire.

During the site visit, an interview was conducted with a Floor Supervisor, who began working as a contractor at LBAD in 1986, and a Lexington Fire Department Station Fire Fighter, who began working at the LBAD station in 2005. Prior to the site visit, Lexington Fire Department Headquarters Administration was contacted in an attempt to locate fire department staff with knowledge of Army fire protection services at LBAD. Due to the length of time that LBAD has been closed under BRAC, former employees and personnel with applicable knowledge are no longer available/accessible; therefore, no other interviewees were identified. Table 3-2 summarizes the interviews conducted and relevant information of PFAS usage.

**Table 3-2. Interview Conducted for PA**

Title	Date	Information Provided
Lexington Fire Department Headquarters Administration	August 24, 2021	Provided that no staff at Lexington Fire Department are remaining from the period of Army operation of the LBAD facility.
Former Army Contractor and Current Floor Supervisor	August 30, 2021	Confirmed the FTA location and types of material that were burned in the FTA.
Lexington Fire Department – LBAD Station Fire Fighter	September 1, 2021	<p>Provided the following information pertaining to the Lexington Fire Department activities at LBAD for the period after 2005 to the present:</p> <ul style="list-style-type: none"> <li>• Lexington Fire Department stores 55-gallon drums of Chemguard 3% AFFF in Building 23.</li> <li>• Testing and training were previously conducted outside the current Fire Station (Building 19).</li> <li>• One occurrence of fire training with AFFF occurred in the field outside Gate 5 to the west of the LBAD facility.</li> <li>• Lexington Fire Department would occasionally service the mobile AFFF units operated by a Government contractor. Service included discharging the units to the grass outside the hangar areas.</li> <li>• AFFF was used during a 2005 fire at former Buildings 100 and 101.</li> </ul>

The following summarizes information obtained regarding potential use, storage, or disposal of PFAS-containing material at LBAD based on the interviews conducted and questionnaires completed:

- KDMA maintains records of AFFF used at the facility in accordance with the Tier II reporting requirements of the Emergency Planning and Community Right-To-Know Act. KDMA records indicate that AFFF is currently stored in Buildings A, B, C, D, E, F, and G. JET-X 2% is used in the fixed high-expansion foam (HEF) system in Building G. Chemguard 1% is used in a fixed AFFF system in Buildings D and E. Several mobile AFFF units staged in Buildings A, B, and F use either Chemguard C303, Chemguard Blizzard, or Chemguard 3% AFFF. KDMA did not report any pre-BRAC transfer use of AFFF at the facility. Buildings D, E, F, and G were constructed post-BRAC transfer, as evident by aerial photography.
- A release of HEF occurred in 2019 during initial system testing of the fixed system in Building G. The HEF entered the oil/water separator (OWS) inside the building, which discharges to the on-post WWTP (Building 12A). Approximately 60,000 gallons of sanitary waste and foam were removed from the WWTP and disposed of off-post at a hazardous waste landfill.
- On January 6, 2021, a release of approximately 315 gallons of Chemguard 1% AFFF foam concentrate was discovered to have leaked from a foam bladder of the fixed AFFF system in Building D. The hardened foam was scraped from the concrete floor.
- The LBAD Station Fire Fighter indicated that the Lexington Fire Department LBAD Station currently stores 55-gallon drums of Chemguard 3% AFFF in Building 23. The Lexington Fire Department occasionally conducted testing and training outside the current fire station (Building 19). This individual recalled that a fire training exercise had occurred in the field outside Gate 5 to the west of the LBAD facility; however, this individual could not remember the exact date. The Lexington Fire Department would occasionally service the mobile AFFF units operated by a Government contractor, which involved discharging the units to the grass outside the hangar areas. This individual described the use of AFFF to aid in extinguishing a 2-day fire in 2005 at former Buildings 100 and 101.

Interview data largely confirmed AFFF use, storage, and disposal ceased after transfer. Interviews did not confirm that the Army Fire Department at LBAD used AFFF prior to closure and transfer. However, given the time frame of operation, it is likely that AFFF was used by the Army and was potentially discharged at the fire training area (FTA) and Building 30 Fire Station.

## 4. SUMMARY OF PA DATA

### 4.1 PREVIOUS PFAS INVESTIGATIONS

In 2012, USEPA published the Third Unregulated Contaminant Monitoring Rule (UCMR3), which required nationwide public water systems (i.e., waterworks) to sample for a list of 30 unregulated contaminants, including 6 chemicals of concern relevant to this PA (i.e., PFOS, PFOA, PFBS, PFNA, perfluoroheptanoic acid [PFHpA], and PFHxS). The water supplier to LBAD, KAW, participated in the UCMR3 evaluation by sampling the six PFAS in 2013. The sampling event included the collection of effluent samples from KAW's Kentucky River Station and Richmond Station treatment plants. PFAS were not detected (USEPA 2021b). USEPA published the Fifth Unregulated Contaminant Monitoring Rule (UCMR5) in 2021, which expanded the list to 29 PFAS for additional sampling between 2023 and 2025. The UCMR5 sampling includes more sensitive analytical limits for PFAS detection.

The Kentucky Department for Environmental Protection (KDEP) completed representative sampling of the Commonwealth's public drinking water supplying 2019 (KDEP 2019). KDEP sampling included surface water intakes for KAW's Kentucky River Station and Richmond Station treatment plants, which service LBAD and the Lexington area. PFAS sample results for the KAW Lexington system show concentrations of PFAS less than the USEPA health advisory levels. The results of KDEP sampling are presented in *Evaluation of Kentucky Community Drinking Water for Per- & Poly-Fluoroalkyl Substances* (KDEP 2019).

In 2020, KDEP further expanded sampling of surface water resources within the Commonwealth, including a surface water station located approximately 1.4 miles downstream from LBAD in the unnamed tributary to North Elkhorn Creek (latitude 38.085800, longitude -84.356100). Concentrations of PFAS present in the sample that exceeded the limits of detection included 1.43 ng/L PFBS, 20.4 ng/L PFHpA, 14.0 ng/L PFHxS, 31.2 ng/L PFOA, 6.34 ng/L PFOS, and 2.4 ng/L PFNA (KDEP 2021). All detected results were less than the USEPA LHA levels. The results of the KDEP sampling are presented in *Evaluating Kentucky Source Waters for Per- & Poly-Fluoroalkyl Substances* (KDEP 2021).

KAW has performed voluntary sampling to better understand the occurrence of certain PFAS in drinking water sources and to be better prepared for potential drinking water standards. PFOA and PFOS were detected at the Richmond Road Station at 2.6 and 2.4 parts per trillion (ppt), respectively in 2021 (KAW 2022). PFAS were not detected in the 2021 samples collected from the Kentucky River Station and Kentucky River Station II.

No PFAS investigations have been conducted at LBAD prior to this PA.

### 4.2 EVALUATED SITES

During the PA records reviews, interviews, aerial photographic analysis, and site reconnaissance, the PA team investigated available documentation and physical evidence for areas having a potential historical PFAS release. The sites evaluated include fire stations; FTAs; landfills; metal plating operations; WWTPs; pesticide facilities; vehicle maintenance shops, which used car washes and engine lubricants; paint shops; and photographic processing facilities, as shown in Figure 4-1 and described in the following sections.

#### 4.2.1 AFFF Use, Storage, and Disposal

Documentation specifying the use of AFFF at LBAD during Army ownership and operation was not identified during the records reviews, interviews, aerial photographic analysis, and site visit conducted as part of this PA. However, given the period of operations and type of activities conducted at LBAD, AFFF was likely used and stored at the facility. In addition, the PA team reviewed documentation that indicate "foam" tanks were present on the Army Fire Department pumper-type fire trucks; therefore, AFFF may have been released during fire training activities, emergency response operations, or AFFF storage operations.

One fire station, one FTA, and one testing area were identified during records reviews and interviews conducted prior to the site visit, as listed below:

- Building 30 Fire Station
- FTA adjacent to the Industrial/Sanitary Landfill
- Building 105 Fire Distribution System Testing Area.

Precise dates of operation and frequency of use are not available for the fire station; however, the fire protection services at the facility prior to BRAC transfer included pumper-type fire trucks that were equipped with “foam” tanks (U.S. Department of the Army 1994). Fire training at the FTA reportedly involved the burning of scrap lumber since 1978 and continued until the burning of general refuse was banned sometime prior to 1990 (Ebasco 1990). Based on the dates of operation of the Building 30 Fire Station and FTA and the presence of “foam” tanks in the Fire Department apparatus during that period, it is likely that AFFF was used at the facility.

Building 105 is described as a fire distribution system testing area in the Enhanced Preliminary Assessment Report (Ebasco 1990). The report also includes Building 105 in the maintenance operations section and several aboveground waste oil tanks were listed in the building inventory, although it is unclear if maintenance occurred in the building. Building 105 is a metal-framed building with three large pull-in bays and trench drains in the floor on the eastern end. An overhead machine lift and trench drains are present inside. A concrete basin is present adjacent to the eastern site of the building. Whether the trench drains and the basin were connected could not be confirmed during the PA. Documentation of AFFF usage could not be confirmed; however, the Army Fire Department was equipped with “foam” tanks; therefore, it is feasible that the fire distribution system testing area may have been used for activities such as fire training and nozzle testing with firefighting foams.

On November 19, 1958, the aircraft runway located in the central part of LBAD was dedicated as Creech Army Airfield (Lexington Herald 1958). The airfield consisted of a 2,200-foot-long, steel mesh strip. The primary use of the airfield was to receive Army and National Guard aircraft for the installation of communications equipment. As reported by the Lexington Herald, during construction of the airfield a section of the golf course at LBAD was temporarily used for landing aircraft. Early depictions of the airfield show a landing strip and taxiway leading to two hangars (Buildings A and B). Use of the runway for fixed-wing aircraft reportedly stopped prior to or during the Vietnam War (Commonwealth of Kentucky 2007). Aerial photography shows that the runway was covered with vegetation in 1983 and a helipad was located to the northwest of Building B. The runway and two new helipads appear in their present configuration between 2006 and 2008 and continue to be known as the Creech Army Air Field Heliport.

#### **4.2.2 Metal Plating Operations**

As reported in the 1994 RCRA Facility Investigation (RFI), Building H was used for painting, wood working, storage facilities, and offices. The 1994 CERFA Report indicated that seven 275-gallon aboveground storage tanks (ASTs) were located in Building H and contained chromium liquid. During the records review, floor plans showing the layout for *Crystal Grinding and Plating Shops, Warehouse 3, Bay C*, dated May 8, 1951 (LBAD 1951a), were reviewed, and the plans indicate Building H contained plating operations. Further details about the times of operations and activities within Building H are limited; however, the time frame 1951 and 1994 encompasses the use of PFAS-containing mist suppressants commonly used during metal plating operations. Present day plating operations (not employing PFAS-containing mist suppressants) were observed within Building H during the PA site visit. No floor drains, sumps, or exterior piping were observed during the site visit, and the operator indicated that plating wastes were now being disposed of off-post.

Industrial operations were conducted in Building 135, including a plating shop that operated between the 1950s and 1976. Activities included metal plating, metal degreasing, paint stripping, anodizing, and fabrication of printed circuits with various metal. The associated wastewater contained cyanide, chromium, copper, cadmium, nickel, and explosives. Floor drains in the building lead to the storm sewer, which discharges to the tributary to Elkhorn Creek (Earth Tech 1994). The effluent was untreated until the industrial wastewater treatment plant (IWTP) (Building 126) was constructed in 1965. The IWTP discharged treated wastewater to the Industrial Waste Lagoons for additional removal of solids. The plating sludge from the plant was disposed of in the Industrial/Sanitary Waste Landfill. The floor of the plating shop consisted of acid-resistant bricks on top of a concrete floor over an aggregate base. A gravel-filled pit once existed in the northwestern corner. Between 1998 and 1999, the building interior and VOC-, semivolatile organic compound (SVOC)-, and metals-impacted soils beneath the floor of the plating shop were remediated (USAMC 2006).

#### **4.2.3 Wastewater Treatment Plants**

Three WWTPs were identified at LBAD during records reviews, including the Old WWTP (Building 12), the New WWTP (Building 12A), and the IWTP (Building 126). Details for each of the WWTPs are summarized below.

Between 1940 and 1977, sanitary wastewater was treated in the Old WWTP, which consisted of an Imhoff tank, a trickling filter, and a secondary clarifier (Ebasco 1990). The treated effluent discharged into a tributary to Elkhorn Creek. Waste sludge was placed in the drying beds at the Old WWTP and then disposed of at the facility landfills. Periodic disposal of industrial wastes to the sanitary sewer reportedly occurred, including the disposal of chromium-containing paint from 1971 to 1972. The Old WWTP was abandoned after construction of the New WWTP was completed in 1977. In 1999, the drying beds were removed (IT 2000a).

The New WWTP was constructed in 1976 and put in operation in 1977. The New WWTP consists of a one-story control and process building, a two-stage biological stabilization unit with filtration and chlorination, and three drying beds. Activities conducted at the New WWTP included the handling and treatment of wastewater streams and the sludge drying beds. Dried sludge from the New WWTP was disposed of in the New Landfill until it was closed in 1980 and post-closure dried sludge was disposed of at the local sanitary landfill. In 1999, an area around the New WWTP was remediated by excavating shallow soils impacted with SVOCs, pesticides, and polychlorinated biphenyls (PCBs) (IT 2000b). The excavated soils were disposed of at Rumpke of Kentucky Landfill in Mt. Sterling, Kentucky.

In 1965, the Building 126 IWTP was constructed for treatment of the industrial wastewater from the Building 135 metal plating operations. Sludge generated from the IWTP was placed in drying beds and disposed of on-post at the Industrial/Sanitary Waste Landfill (Ebasco 1990). Prior to its construction, wastewater passed through floor drains into a storm sewer, which discharged into the tributary to Elkhorn Creek. Later in the 1960s, the industrial waste lagoons were constructed over this tributary for additional removal of settleable solids. The plant consisted of a cyanide treatment tank, chromate treatment tank, neutralizing tank, and primary settling tank. The sludge generated in the IWTP was pumped to two drying beds located north of the IWTP. The dry sludge was collected and disposed of in the Industrial/Sanitary Waste Landfill. Removal of the IWTP and drying beds occurred in 1997.

#### **4.2.4 Landfills**

Three former landfills and a disposal area were identified at LBAD, including the Old Landfill, Industrial/Sanitary Waste Landfill, New Landfill, and Area A Disposal Area. Details on the former landfills and disposal area are summarized below.

The Old Landfill received solid and hazardous waste generated at LBAD between 1942 and 1950. No lining was installed at the time of construction. Wastes placed in the landfill reportedly included flammable

liquids, paper, wood, lead batteries, chrome sludge, paints, solvents, and sewage sludge. Combustible materials were burned at the landfill before being covered (Earth Tech 1994). Given the operational period of the Old Landfill, it did not likely receive PFAS-containing materials.

The Industrial/Sanitary Waste Landfill was unlined and used between 1950 and 1970. Wastes disposed of in the landfill reportedly contained solvents, metal plating sludge, transformer fluids, sandblasting dust containing chrome, and sewage sludge. The operational time frame coincides with the use of PFAS-based mist suppressants for metal plating operations. Combustible materials were burned at the landfill before being covered (Earth Tech 1994). The landfill was closed in 1983 and capped with a clay and soil cover; however, delineation of the landfill boundaries was incomplete, and an RFI was needed to delineate the extent of the landfill (Metcalf & Eddy 1994).

The “New Landfill” was used between 1971 and 1980. No lining was installed during construction. Wastes buried at the landfill reportedly contained plating waste, paints, infectious waste, and sewage sludge (Earth Tech 1994). During closure, a clay and soil cap was placed over the landfill; however, delineation of the landfill boundaries was incomplete, and an RFI was needed to delineate the extent of the landfill (Metcalf & Eddy 1994).

A landfill cap and cover system complying with both solid waste landfill closure and Federal requirements for hazardous waste landfill closure was constructed over each of the former landfills in October 1995 (SERES 2021). LTM of the facility landfills, including groundwater sampling and inspections, is conducted under the Site-wide Long-term Monitoring, Operation and Maintenance Plan for the Waste Management Areas and Vinyl Chloride Plume Monitoring Addendum No. 2 (Shaw 2009).

Area A is a disposal area, which consisted of two septic tanks and a leach field near Building B that was used for disposal of sewage generated from trailers previously located near the building. After the septic tanks were abandoned, the area was reportedly used during the early 1970s for the disposal of metal plating sludge for approximately 2 years (Metcalf & Eddy 1994). Area A was also investigated as part of the 1994 RFI and remediated by excavating contaminated soils in 1995 and 1996. The RFI noted that “no indicators were found of plating constituents such as cyanide, copper, nickel, or chromium.” Thus, it is uncertain whether Area A was used for disposal of metal plating sludge. Available documentation indicates that Area A may now be located partially beneath a new building.

#### **4.2.5 Other Potential Sources of PFAS**

In addition to AFFF-related PFAS sources, other potential sources of PFAS may be associated with the use of some types of pesticides, car washes, engine lubricants, paint shops, and photographic processing facilities. The following paragraphs describe potential non-AFFF PFAS sources at LBAD:

- **Industrial Waste Lagoons** – The Industrial Waste Lagoons at LBAD began operation in 1965. The lagoons were built to receive effluent from the Building 126 IWTP. They were operated in series for settling suspended solids prior to discharge into an unnamed tributary to Elkhorn Creek. The IWTP treated metal plating wastes for removal of cyanide, chromium, and other heavy metals. Effluent discharge from the IWTP to the lagoons ceased in 1977 (Sverdrup 1996). RFI samples collected between 1991 and 1994 indicated that VOCs, SVOCs, pesticides, PCBs, cyanide, and metals were within the soils surrounding the Industrial Waste Lagoons. Remediation of the lagoons, including treatment and disposal of lagoon water, sludge, surrounding soil, and regrading activities, were completed in 1996.
- **Pesticides** – Buildings 8 and 303 were pesticide storage areas at LBAD. Although a complete list of pesticides that were stored, used, or disposed of at LBAD is not available, the use of fluorinated pesticides was infrequent until about the mid-2000s (Alexandrino et al. 2022). Given the operational period of LBAD, the likelihood of PFAS impacts due to pesticide use, storage, or disposal is assumed to be low.

- **Photographic Processing** – Photographic processing activities were conducted in Buildings 4, 5, 134, 135, and 139. These photographic processing areas produced prints, photographic copy, and graphics. The photographic process waste solutions were discharged to either leach fields or the sanitary sewer (Metcalf & Eddy 1994). A complete list of photographic processing chemicals used, stored, or disposed of at LBAD is not available. However, the use of PFAS-containing chemicals did not become prevalent in the photography industry until about the mid-1990s (Kodak 2002). Given the operational period of LBAD, the likelihood of PFAS impacts due to the use, storage, or disposal of photographic processing chemicals is assumed to be low.
- **Wash Racks** – Three vehicle wash racks were identified at LBAD (Vehicle Wash Rack I, Vehicle Wash Rack II, and the Building 30 Former Fire Station Wash Rack). Vehicle Wash Rack I included a siltation pond and grease separator that discharged to the sanitary sewer. The wash rack was removed, and sludge contained with metals and polynuclear aromatic hydrocarbons (PAHs) was disposed of off-post (USAMC 2006). Vehicle Wash Rack II reportedly used water only during washing activities and discharged to sanitary sewer. The wash rack was used for occasionally washing small vehicles (Metcalf & Eddy 1994). Although a complete list of products used for Vehicle Wash Racks I and II wash rack operations is not available, it is understood that common products used in vehicle washing may have contained minor amounts of PFAS-containing material and would not be considered a significant source of PFAS contamination. In addition, the activities adjacent to these wash racks were not tied to any other known areas where PFAS-containing materials were used, stored, or disposed of. As a result, the potential PFAS impacts were determined to be unlikely. Significant PFAS impacts would have been more likely from emergency vehicles being serviced at the wash racks. Emergency vehicles were likely serviced at the Building 30 Former Fire Station wash rack.

During the document research and site visit, no additional potential PFAS-containing material use, storage, or disposal AOPs were identified.

#### 4.3 POTENTIAL OFF-POST AND POSTTRANSFER PFAS SOURCES

An exhaustive search to identify all potential off-post PFAS sources (i.e., not related to operations at LBAD) is not part of the PFAS PA program. However, a search of significant potential contributors (e.g., airports, landfills, WWTPs) was performed.

Potential off-post PFAS sources within a 5-mile radius are shown in Figure 4-3. These include three airports between 1 and 2 miles north of LBAD (Zanzibar Farm, Air Castle, and Wild Blue) and two airports between 4 and 5 miles to the south and east of LBAD (Coal Field and Renick Field). It is unknown if these airports have AFFF fire suppression systems or use AFFF for fire training and/or fire response.

In addition, potential post-transfer PFAS sources are documented in this PA to support an understanding of the CSM. Knowledge of post-transfer operations within the facility boundary was provided by KDMA, who owns the entirety of the LBAD facility, to determine the current site use and evaluate the potential for PFAS use/release. As described in Section 3.4, LBAD includes several areas where operations after BRAC transfer include potential and/or confirmed PFAS use and/or release. The potential PFAS sources that are present on-post, but occurred after Army operations, are shown in Figure 4-2 and include the following:

- AFFF storage in Buildings A, B, C, D, E, F, and G.
- A 2019 release of HEF from the fixed HEF system in Building G. Released HEF entered the buildings OWS and discharged to the facility's WWTP (Building 12A) before being disposed of off-post.
- A 2021 release of Chemguard 1% AFFF foam concentrate from a foam bladder of the fixed AFFF system in Building D.
- Lexington Fire Department AFFF storage (Building 23).

- Lexington Fire Department testing and training outside the current fire station (Building 19).
- Lexington Fire Department training in the field outside Gate 5 to the west of the LBAD facility.
- Mobile AFFF unit service activities performed by the Lexington Fire Department in the grass areas outside the hangar.
- The 2005 fire at former Buildings 100 and 101 where the Lexington Fire Department applied AFFF. The fire and associated suppression activities occurred over a 2-day period.

## 5. SUMMARY OF PA RESULTS

The areas evaluated for potential PFAS use, storage, or disposal at LBAD were further refined during the PA process and categorized as an AOPI or not retained. Of these areas, 9 were retained as AOPIs and 18 were not retained as AOPIs.

### 5.1 AREAS NOT RETAINED AS AOPIs

Based on analysis of information obtained during this PA, the areas described below were not retained as AOPIs. These areas were previously identified as potential PFAS sources (e.g., AFFF storage, car washes, automobile maintenance, photographic processing, pesticide use or storage, WWTPs, landfills) at LBAD. However, PA research does not indicate that PFAS-containing material was used, stored, or disposed of at these areas. A brief site history and the rationale for eliminating the areas as AOPIs is presented in Table 5-1.

**Table 5-1. Summary of Areas Not Retained as AOPIs**

Area Description	Dates of Operation	Relevant Site History	Rationale
Photographic Processing Areas (Buildings 4, 5, 134, 135, 139)	Varied	Produced prints, photographic copy, and graphics. Solutions were discharged to either leach fields or the sanitary sewer (Metcalf & Eddy 1994).	No evidence that PFAS-containing materials were used, stored, or disposed of. Given the operational period of LBAD, the likelihood of PFAS impacts due to the use, storage, or disposal of photographic processing chemicals is assumed to be low.
Building 8 Pesticide Storage and OWS	1942 to 1991	Metals- and PAH-contaminated soils were in this area. An OWS and contaminated soils were removed in 1997 (USAMC 2006).	No evidence that PFAS-containing materials were used, stored, or disposed of. Given the operational period of LBAD, the likelihood of PFAS impacts due to pesticide use, storage, or disposal is assumed to be low.
Building 9 Gasoline Dispensing Area	1942 to present	Gasoline station including two USTs and dispenser. The two original tanks were removed in 1991 and replaced with fiberglass tanks (Metcalf & Eddy 1994). No fire suppression system was evident.	No evidence that PFAS-containing materials were used, stored, or disposed of.
Building 11 Fire Pumps	1949 to present	Pumps and pump house for the facility fire hydrants from the building inventory listed in the 1993 Spill Prevention and Countermeasures Plan. Reviewed during site visit and used for water distribution only. Identified in aerial photography as early as 1949.	No evidence that PFAS-containing materials were used, stored, or disposed of.

**Table 5-1. Summary of Areas Not Retained as AOPs (Continued)**

Area Description	Dates of Operation	Relevant Site History	Rationale
Building 12 Old WWTP	1942 to 1977	The Old WWTP received and treated sanitary wastes for the facility. Discharges of industrial wastes to the sanitary sewer reportedly occurred; however, minimal documentation is available (IT 2000a).	No evidence that PFAS-containing materials were disposed of at the Building 12 Old WWTP.
Building 12A New WWTP	1977 to present	The New WWTP is presently operating and receives and treats sanitary waste for the facility. (IT 2000b). The sludge drying beds are no longer in use.	No evidence that PFAS-containing materials were disposed of at the Building 12A New WWTP.
Building 43 Sewage Lift Station	1942 to 1991	Forklift maintenance building with discharge to a sewer lift station (Metcalf & Eddy 1994). Soil and lift station were removed.	No evidence that PFAS-containing materials were used, stored, or disposed of.
Building 46 Diesel Dispensing Area	1942 to unknown	Diesel fuel dispensing outlet with three ASTs (Metcalf & Eddy 1994). The fueling outlet and tanks were removed and the area is now a parking lot. Removal records were not available; however, the outlet is not present in the aerial photography from 2004.	No evidence that PFAS-containing materials were used, stored, or disposed of.
Building 139 Sump and Sand Filter	1942 to 1991	Spent solutions from photographic processing in Building 139 was discharged to a sump and sand filter. The discharge would then run to the surface of the Old Landfill. Beginning in the 1970s, the discharge was rerouted to the storm sewer (Jacobs 2003). Metals, VOCs, and phthalate-contaminated soils along with the sump and filter were removed (USAMC 2006).	Use of PFAS-containing chemicals did not become prevalent in the photography industry until the mid-1990s. Given the operational period of LBAD, the likelihood of PFAS impacts due to the use, storage, release, or disposal of photographic processing chemicals is assumed to be low. No evidence that PFAS-containing materials were used, stored, or disposed of.
Building J Foam Chemical Tank	1950s to unknown	A 1994 Spill Prevention and Control and Countermeasures Plan documents four 60-gallon tanks of foam chemicals in Building J. Building J contained operations for the production of polyurethane package materials (Earth Tech 1994).	Polyurethane is not fluorinated, and polyurethane packaging is not known as a PFAS-containing material. No evidence that PFAS-containing materials were used, stored, or disposed of.
Area A	1970s	Area A is a disposal area, which consisted of two septic tanks and a leach field that was reportedly used for the disposal of metal plating sludge for approximately 2 years (Metcalf & Eddy 1994). During the 1994 RFI, no indicators of plating constituents were found.	The 1994 RFI concluded that the chemical analysis were not consistent with plating wastes. Therefore, it is unlikely that plating wastes were disposed of in this area. No evidence that PFAS-containing materials were used, stored, or disposed of.

**Table 5-1. Summary of Non-AOPs at LBAD (Continued)**

Area Description	Dates of Operation	Relevant Site History	Rationale
Area B	1952 to 1975	Area where industrial wastes of unknown origin were dumped (Metcalf & Eddy 1994). Metals and PAHs detected at concentrations greater than screening levels were later remediated by excavation.	No evidence that PFAS-containing materials were used, stored, or disposed of.
Old Landfill	1942 to 1950	Unlined landfill that reportedly received flammable liquids, paper, wood, lead batteries, chrome sludge, paints, solvents, and sewage sludge (Earth Tech 1994).	Landfill closure predates potential PFAS sources used at the facility.
Underground Emergency Holding Tank	1942 to 1991	A 750-gallon underground emergency tank located to the west of the forklift battery charging area of Building J. Holes cut in the exterior allowed liquids to drain to the floor pipes, which then led to the tank. Sediment samples collected in 1994 were nonhazardous, and the tank was removed in 1996 (USAMC 2006).	No evidence that PFAS-containing materials were used, stored, or disposed of.
Vehicle Wash Rack I	1942 to 1991	Vehicle wash rack, including a siltation pond and grease separator that discharged to the sanitary sewer. The wash rack was removed, and sludge contaminated with metals and PAHs was disposed of off post (USAMC 2006).	No evidence that PFAS-containing materials were used, stored, or disposed of. Common products used in vehicle washing may have contained minor amounts of PFAS-containing material and would not be considered a significant source of PFAS contamination.
Vehicle Wash Rack II	1942 to 1991	Wash rack that discharged to sanitary sewer and reported used water only. The wash rack was used for occasionally washing small vehicles (Metcalf & Eddy 1994).	No evidence that PFAS-containing materials were used, stored, or disposed of. Common products used in vehicle washing may have contained minor amounts of PFAS-containing material and would not be considered a significant source of PFAS contamination.
Waste Storage Areas	Varied	Several small and large waste storage and accumulation areas.	No evidence that PFAS-containing materials were used, stored, or disposed of.
Creech Airfield	Unknown	No records of aircraft crashes were found during records review. A UST was suspected near the former landing field/helicopter pad used for the refueling of aircraft. The exact location is not known. Geophysical and soil gas surveys were conducted as part of the Phase II RFI; however, no features including fire suppression were identified (Metcalf & Eddy 1994).	No evidence that PFAS-containing materials were used, stored, or disposed of.

## 5.2 AOPIs

Based on analysis of information obtained during document research, personnel interviews, and/or site reconnaissance, nine areas were categorized as AOPIs resulting from Army activities, as presented in Table 5-2.

**Table 5-2. Summary of AOPIs at LBAD**

<b>Area Description</b>	<b>Dates of Operation</b>	<b>Relevant Site History</b>	<b>Rationale</b>
Building H Plating Operations	Approximately 1951 to 1994	Floor plans showing the layout for Crystal Grinding and Plating Shops, Warehouse 3, Bay C, dated May 8, 1951, showed that Building H contained plating operations.	PFAS-containing surfactants were likely used during the plating process given the period of operation.
Building 30 Former Fire Station	Approximately 1951 to 1994	The fire protection services at the facility prior to BRAC transfer included two pumper-type fire trucks that were each equipped with 40-gallon “foam” tanks.	The Army Fire Department likely used AFFF during fire training and response activities, given the suspected period of operation of the fire station.
Building 105 Fire Distribution Testing Area	Approximately 1990 to unknown	Building 105 was described as a fire distribution system testing area in the Enhanced Preliminary Assessment Report.	Presumably, fire distribution system testing may have included such activities as fire training and nozzle testing with firefighting foams.
Building 135 Plating Operations and Building 126 IWTP	1950s to 1976	Building 135 contained a plating shop. Originally, the wastewater generated from plating activities was discharged from floor drains to the storm sewer. The IWTP (Building 126) was constructed in 1965 and is located adjacent to the Building 135 plating room. The IWTP treated the effluent from the plating operations.	PFAS-containing mist suppressants were likely used during the plating process given the period of operation.
FTA	1978 to unknown	The FTA is an approximate 50- by 100-foot area where scrap lumber was burned since 1978 and continued until the burning of general refused was banned.	It is likely that AFFF firefighting foam was used at the FTA based on the period of operation.
Industrial Waste Lagoons	1965 to 1996	The lagoons were constructed in 1965 over the surface water drainage channel that leads to the unnamed tributary. Prior to construction of the IWTP, the untreated discharge from the Building 135 Plating Operations was conveyed to the Industrial Waste Lagoons area.	The Industrial Waste Lagoon area historically received untreated discharge from the Building 135 plating operations.
Industrial/Sanitary Landfill	1950 to 1970	Wastes disposed of in the landfill reportedly contained solvents, metal plating sludge, transformer fluids, sandblasting dust containing chrome, and sewage sludge.	PFAS-containing surfactants were likely used during the plating process. The plating sludge was then disposed of in the landfill.

**Table 5-2. Summary of AOPIs at LBAD (Continued)**

Area Description	Dates of Operation	Relevant Site History	Rationale
IWTP Drying Beds	1965 to 1976	Sludge generated from the Building 126 IWTP was pumped across the street to two drying beds located to the north of Building 135. The IWTP treated metal plating wastes from Building 135. The dried sludge was disposed of on-post at the Industrial/Sanitary Waste Landfill.	PFAS-containing surfactants were likely used during the plating process from which the sludge originated.
New Landfill	1971 to 1980	Wastes buried at the landfill reportedly contained plating waste, paints, infectious waste, and sewage sludge.	PFAS-containing surfactants were likely used during the plating process. The plating waste was then disposed of in the landfill.

### 5.2.1 Preliminary CSM

A preliminary CSM was prepared for each of the installation’s AOPIs in accordance with the USACE Engineer Manual on Conceptual Site Models, EM 200-1-12 (USACE 2012) and USEPA guidance. The preliminary CSMs identified potential human receptors and chemical exposure pathways based on current and/or reasonably anticipated future land uses. The preliminary CSMs identified soil, groundwater, surface water, and sediment pathways as potentially complete.

Based on the documented or potential historical use, storage, or disposal of PFAS-containing materials at LBAD, affected media are likely to consist of soil, groundwater, surface water, and sediment. Release and transport mechanisms include dissolution/desorption from soil to groundwater, runoff/dissolution/adsorption with surface water or stormwater, and recharge to groundwater from surface water. While other potential exposure media (i.e., soil and sediment) besides drinking water sources (i.e., groundwater and/or surface water) may be impacted by PFAS, direct ingestion via drinking water is the most likely exposure route, and thus the Army’s primary concern for human exposure. Therefore, the focus of the Army’s PA program is on potential human exposures via drinking water ingestion. The potential for human exposures to PFAS through non-drinking water pathways has not yet been established and may be evaluated in the future if it is determined that those pathways warrant further consideration. The CSMs presented in this report focus on drinking water pathways via groundwater and surface water that are known to be used as a source of potable water.

LBAD and the surrounding area are provided public water by KAW, whose water source is the Kentucky River and Jacobsen Reservoir, as discussed in Section 2.8. AKGWA records within 1 mile of LBAD included records for two industrial use wells at the Prestress Services of Kentucky Inc. property, a concrete manufacturer, which borders LBAD to the south of the installation. Two domestic wells are located 650 and 1,370 feet to the northwest and one domestic well is located 3,200 feet north of LBAD. A cluster of four agricultural wells is located as close as 2,760 feet east of LBAD, and another cluster of four agricultural wells is located as close as 2,890 feet southwest of LBAD. Between a 1- and 4-mile radius of LBAD, 20 domestic, 1 commercial, and 32 agricultural wells plus 7 records with an unknown use were located in the AKGWA records.

A facility-wide deed restriction for use of groundwater was implemented in 2006 due to past pesticide use and industrial and landfill operations (USAMC 2006).

A groundwater exposure pathway is considered potentially complete where a constituent of interest (COI) could migrate from the AOPI source area to groundwater and/or surface water that is used for drinking

water. Otherwise, the groundwater exposure pathway is considered incomplete. The following parameters are used to determine if an AOPI source area had a potentially complete groundwater exposure pathway:

- AOPIs that have the potential to influence groundwater on post are considered to have an incomplete groundwater exposure pathway for on post receptors because there is no on post potable use of groundwater allowed under the facility-wide deed restriction.
- AOPIs that have the potential to influence groundwater that flows off post are considered to have a potentially complete exposure pathway for off-post receptors.

The soil exposure pathway is considered potentially complete where COIs could be present in soil. A surface water exposure pathway is considered potentially complete where COIs could be present in a surface water body (e.g., a reservoir or large river) that serves as a potable water source. No on-post surface water features are used as a drinking water source. Most of the surface water from the facility discharges to the tributary of Elkhorn Creek, which joins the Kentucky River several miles downstream; therefore, a potential exposure route for off-post surface water is potentially present.

Figure 4-2 presents the locations of the AOPIs. AOPI-specific CSM summaries are provided in Tables 5-3 through 5-11.

### 5.2.2 Building H Plating Operations Rationale and CSM

The Building H Plating Operations were identified as an AOPI following records reviews, interviews, aerial photograph review, and site reconnaissance. PFAS-containing surfactants were likely used during the plating process given the period of operation of the chrome plating. The CSM for the Building H Plating Operations is summarized in Table 5-3.

Building H is one of eight large warehouses located along the southern border of LBAD. Historical activities in the warehouse include painting and wood working, and the building houses storage facilities and offices (Metcalf & Eddy 1994). Seven 275-gallon ASTs were located in Building H and contained chromium liquid (Earth Tech 1994). During the records review, floor plans showing the layout for *Crystal Grinding and Plating Shops, Warehouse 3, Bay C*, dated May 8, 1951, showed that Building H contained plating operations (LBAD 1951a). Additional details about the times of operations and activities within Building H are limited; however, the time frame between 1951 and 1994 encompasses the use of PFAS-containing mist suppressants during chrome plating operations.

The PA team conducted a visual inspection of the Building H area and observed that plating operations (not employing PFAS mist suppressants) are presently conducted in the same area. No floor drains, sumps, or exterior piping were observed during the site visit, and the operator indicated that plating wastes were now being disposed of off-post. A small grassy area is immediately outside Building H, but most of the exterior surfaces are paved. Drainage leads to the facility storm drainage system.

**Table 5-3. AOPI CSM Information Profile – Building H Plating Operations**

Profile Type	Information Needs	Preliminary Assessment Findings
Site Profile	AOPI site structures/description	Shop located along the northern wall of the warehouse mist suppressant building. The exterior surface is mostly paved.
	Latitude, longitude	38.07430, -84.32218
	Size	0.17 acres
Land Use	Current/future land use	Commercial/Industrial

**Table 5-3. AOPI CSM Information Profile – Building H Plating Operations (Continued)**

Profile Type	Information Needs	Preliminary Assessment Findings
CSM Profile	Source media	Paved surface and soil
	Migration routes/release mechanisms	Constituents could migrate to stormwater or surface water due to runoff from paved surfaces. Constituents could migrate to soil or sediment via runoff and adsorption upon entering the stormwater collection system or by release from underground piping. Constituents could migrate to groundwater through cracks in the pavement or through stormwater or surface water recharge to groundwater from surface water.
	Exposure pathways, media, and human receptors	Groundwater flows to the south within this area. Surface water is captured by the facility storm drains. The facility storm drains discharge to the tributary of Elkhorn Creek, which flows into the Kentucky River, a water source for KAW. AKGWA well records suggest that water wells may be present on the Prestress Services property immediately downgradient from the facility. Therefore, a potential complete exposure pathway for off-post human receptors exists.

**5.2.3 Building 30 Former Fire Station Rationale and CSM**

The Former Fire Station (Building 30) was identified as an AOPI following records reviews, interviews, aerial photograph review, and site reconnaissance. The Army Fire Department likely used AFFF during fire training and response activities, given the suspected period of operation of the fire station. The CSM for the Building 30 Former Fire Station is summarized in Table 5-4.

The Former Fire Station is a one-story building with a basement and presently contains several office spaces used by the Kentucky State Police. Floor plans detailing the layout for *Fire Station 30 Heating*, dated December 12, 1951, show that the station had three drive-in bays in the center of the building where firefighting apparatus were stored (LBAD 1951b). A smaller garage building and parking area are located behind the former fire station. A 10- by 10-foot wash rack lies between the former fire station and the garage and consists of a concrete basin with garden hose. The wash rack details were located during the records review in the drawing *Proposed Wash Rack at Building 30*, dated December 10, 1959 (LBAD 1959). Precise dates of operation are not available for the fire station; however, the fire protection services at the facility prior to BRAC transfer included two pumper-type fire trucks that were each equipped with 40-gallon “foam” tanks (U.S. Department of the Army 1994).

The PA team conducted a visual inspection of Building 30 and did not observe any floor drains or sumps; however, vinyl tile has been placed over the original flooring throughout the building. The exterior ground surface includes both paving and grass and slopes to the southeast.

**Table 5-4. AOPI CSM Information Profile – Building 30 Former Fire Station CSM**

Profile Type	Information Needs	Preliminary Assessment Findings
Site Profile	AOPI site structures/description	Block structure with office spaces. The exterior is partially paved and partially grass.
	Latitude, longitude	38.07878, -84.32553
	Size	0.18 acres
Land Use	Current/future land use	Commercial/Industrial

**Table 5-4. AOPi CSM Information Profile – Building 30 Former Fire Station CSM (Continued)**

Profile Type	Information Needs	Preliminary Assessment Findings
CSM Profile	Source media	Paved surface and soil
	Migration routes/release mechanisms	Constituents could migrate to stormwater or surface water due to runoff from paved surfaces. Constituents could migrate to soil or sediment via runoff and adsorption upon entering the stormwater collection system or by release from underground piping. Constituents could migrate to groundwater through cracks in the pavement or through stormwater or surface water recharge to groundwater.
	Exposure pathways, media, and human receptors	Groundwater flows to the south within this area. Surface water is captured by the facility storm drains. The facility storm drains discharge to the tributary of Elkhorn Creek, which flows into the Kentucky River, a water source for KAW. AKGWA well records suggest that water wells may be present on the Prestress Services property immediately downgradient from the facility. Therefore, a potential complete exposure pathway for off-post human receptors exists.

**5.2.4 Building 105 Fire Distribution System Testing Area Rationale and CSM**

The Building 105 Fire Distribution System Testing Area was identified as an AOPi following records reviews, interviews, aerial photograph review, and site reconnaissance. The Enhanced Preliminary Assessment Report (Ebasco 1990) includes Building 105 in its evaluation of maintenance and operations buildings and further describes the building use as a fire distribution system testing area. It is not clear exactly what maintenance occurred in the building; however, the report describes the presence of aboveground waste oil tanks outside the building. The CSM for the Building 105 Fire Distribution System Testing Area is summarized in Table 5-5.

Building 105 is a metal-framed building with three large pull-in bays. An overhead machine lift and trench drains are located inside. Trench drains are located in the floor along the eastern end of the building. A concrete basin is located to the east of the building. Whether the trench drains and the basin were connected could not be confirmed. A paved parking is located to the north and west. The ground surface slopes into the grassy area to the south and east.

Presumably, fire distribution system testing may have included such activities as fire training and nozzle testing with firefighting foams. The Army Fire Department pumper-type fire trucks were equipped with “foam” tanks, and the testing area may have been used for this purpose.

**Table 5-5. AOPi CSM Information Profile – Building 105 Fire Distribution System Testing Area**

Profile Type	Information Needs	Preliminary Assessment Findings
Site Profile	AOPi site structures/description	Metal-frame building with concrete floor and trench drains. A concrete basin is located outside. The exterior ground surface is either paved or grass and slopes to the southeast.
	Latitude, longitude	38.07666, -84.32494
	Size	0.08

**Table 5-5. AOPi CSM Information Profile – Building 105 Fire Distribution System Testing Area (Continued)**

<b>Profile Type</b>	<b>Information Needs</b>	<b>Preliminary Assessment Findings</b>
Land Use	Current/future land use	Commercial/Industrial
CSM Profile	Source media	Paved surface and soil
	Migration routes/release mechanisms	Constituents could migrate to stormwater or surface water due to runoff from paved surfaces. Constituents could migrate to soil or sediment via runoff and adsorption upon entering the stormwater collection system or by release from underground piping. Constituents could migrate to groundwater through cracks in the pavement or through stormwater or surface water recharge to groundwater.
	Exposure pathways, media, and human receptors	Groundwater flows to the south within this area. Surface water is captured by the facility storm drains. The facility storm drains discharge to the tributary of Elkhorn Creek, which flows into the Kentucky River, a water source for KAW. AKGWA well records suggest that water wells may be present on the Prestress Services property immediately downgradient from the facility. Therefore, a potential complete exposure pathway for off-post human receptors exists.

**5.2.5 Building 135 Plating Operations and Building 126 IWTP Rationale and CSM**

The Building 135 Plating Operations and associated processes in the Building 126 IWTP were identified as an AOPi following records reviews, interviews, and aerial photograph review. PFAS-containing mist suppressants were likely used during the plating process given the period of operation of the chrome plating. The CSM for the Building 135 Plating Operations and Building 126 IWTP is summarized in Table 5-6.

Building 135 contained a plating shop, which operated between the 1950s and 1976. Originally, the wastewater generated from plating activities was discharged from floor drains to the storm sewers leading to the tributary of Elkhorn Creek (Earth Tech 1994). The IWTP (Building 126) was constructed in 1965 and is located adjacent to the Building 135 plating room. The IWTP treated the effluent from the plating operations and then discharged to the Industrial Waste Lagoons for additional removal of settleable solids. The plant consisted of a cyanide treatment tank, chromate treatment tank, neutralizing tank, and primary settling tank. The IWTP was removed and contaminated soils remediated between 1996 and 1997 (Sverdrup 1998). The floor of the plating shop consisted of acid-resistant bricks on top of a concrete floor over an aggregate base. A gravel-filled pit once existed in the northwestern corner. Between 1998 and 1999, the building interior and soil beneath the floor of the plating shop were remediated (USAMC 2006).

The PA team conducted a visual inspection of the Building 135 Plating Shop and Building 126 IWTP areas. No floor drains, sumps, or treatment process infrastructure were observed. The floor in the interior of Building 135 is concrete. Several concrete patches are noticeable, suggesting the former presence of wall partitions or equipment fixtures. The exterior of Building 135 and near Building 126 is either concrete or asphalt, which slopes to a small grassy area in the east.

**Table 5-6. AOPI CSM Information Profile – Building 135 Plating Operations and Building 126 IWTP**

<b>Profile Type</b>	<b>Information Needs</b>	<b>Preliminary Assessment Findings</b>
Site Profile	AOPI site structures/description	Building 135 is a warehouse building with concrete flooring and bay doors leading outside. The exterior is paved asphalt or concrete. Building 126 was located along the exterior of the Building 135 plating shop and is now a paved area.
	Latitude, longitude	38.07772, -84.32612
	Size	0.18
Land Use	Current/future land use	Commercial/Industrial
CSM Profile	Source media	Paved surfaces
	Migration routes/release mechanisms	Constituents could migrate to stormwater or surface water due to runoff from paved surfaces. Constituents could migrate to soil or sediment via runoff and adsorption upon entering the stormwater collection system or by release from underground piping. Constituents could migrate to groundwater through cracks in the pavement or through stormwater or surface water recharge to groundwater.
	Exposure pathways, media, and human receptors	Groundwater flows to the south within this area. Surface water is captured by the facility storm drains. Surface water flow along the exterior of Building 135 and former Building 126 would trend to the east. The facility storm drains discharge to the tributary of Elkhorn Creek, which flows into the Kentucky River, a water source for KAW. AKGWA well records suggest that water wells may be present on the Prestress Services property immediately downgradient from the facility. Therefore, a potential complete exposure pathway for off-post human receptors exists.

**5.2.6 Fire Training Area Rationale and CSM**

The FTA was identified as an AOPI following records reviews, interviews, and aerial photograph review. Based on the FTA’s period of operation and the presence of “foam” tanks at the Fire Department during that period, it is likely that AFFF firefighting foam was used at the FTA. The CSM for the FTA is summarized in Table 5-7.

The FTA is an approximate 50- by 100-foot area where scrap lumber was burned since 1978 and continued until the burning of general refused was banned (Ebasco 1990). During capping of the Industrial/Sanitary Waste Landfill, portions of the FTA were excavated and placed in the landfill prior to cap construction (Sverdrup 1998). The exact details and frequency of fire training activities at the FTA are not available.

The PA team conducted a visual inspection of the FTA. The FTA is generally covered in grass with some loose and fractured asphalt spread throughout. Portions of the FTA contained a few inches of ponded water. The area slopes to the south-southeast.

**Table 5-7. AOPI CSM Information Profile – FTA**

<b>Profile Type</b>	<b>Information Needs</b>	<b>Preliminary Assessment Findings</b>
Site Profile	AOPI site structures/description	The FTA was an open area immediately adjacent to the Industrial/Sanitary Waste Landfill
	Latitude, longitude	38.07878, -84.32553
	Size	0.35
Land Use	Current/future land use	Commercial/Industrial

**Table 5-7. AOPi CSM Information Profile – FTA (Continued)**

Profile Type	Information Needs	Preliminary Assessment Findings
CSM Profile	Source media	Soil
	Migration routes/release mechanisms	Constituents could migrate from soil to groundwater via desorption and dissolution. Constituents could migrate to surface water due to runoff, dissolution, and adsorption from stormwater and recharge to groundwater.
	Exposure pathways, media, and human receptors	Groundwater flows to the south within this area. Surface water is captured by the facility storm drains. The facility storm drains discharge to the tributary of Elkhorn Creek, which flows into the Kentucky River, a water source for KAW. AKGWA well records suggest that water wells may be present on the Prestress Services property immediately downgradient from the facility. Therefore, a potential complete exposure pathway for off-post human receptors exists.

**5.2.7 Industrial Waste Lagoons Rationale and CSM**

The Industrial Waste Lagoons were identified as an AOPi following records reviews, interviews, and aerial photograph review. PFAS-containing mist suppressants were likely used during the plating process at Building 135 given the period of operation of the chrome plating. The Industrial Waste Lagoons were constructed in 1965 in the area that received untreated effluent from Building 135 before discharge to the unnamed tributary of Elkhorn Creek. Once constructed, the Industrial Waste Lagoons received treated effluent from the IWTP. The CSM for the Industrial Waste Lagoons is summarized in Table 5-8.

The Industrial Waste Lagoons were built to receive effluent from the IWTP (Building 126) for settling suspended solids prior to discharge into an unnamed tributary to Elkhorn Creek. The lagoons were constructed in 1965 over the surface water drainage channel that leads to the unnamed tributary. Prior to construction of the IWTP, the untreated discharge from the Building 135 Plating Operations was conveyed to the Industrial Waste Lagoons area. When the IWTP became operational in 1965, the metal plating wastes from the Building 135 Plating Operations were treated for the removal of cyanide, chromium, and other heavy metals. Effluent discharge from the IWTP to the lagoons ceased in 1977 (Sverdrup 1996). Remediation of the lagoons, including treatment and disposal of lagoon water, sludge, surrounding soil, and regrading activities, were completed in 1996, and the lagoon area has since been regraded.

The PA team conducted a visual inspection of the Industrial Waste Lagoon area. The Industrial Waste Lagoon area is vegetated and slopes to the southwest. A rip-rap lined drainage channel runs east to west through the area and discharges surface water runoff in the west. An embankment is present along the southern portion of the lagoon area where a rock outcrop lies exposed along the adjacent roadway.

**Table 5-8. AOPi CSM Information Profile – Industrial Waste Lagoons**

Profile Type	Information Needs	Preliminary Assessment Findings
Site Profile	AOPi site structures/description	Vegetated area with a rip-rap lined stormwater channel running east to west through the center. The ground surface slopes to the southwest.
	Latitude, longitude	38.07665, -84.32934
	Size	1.08
Land Use	Current/future land use	Commercial/Industrial

**Table 5-8. AOPI CSM Information Profile – Industrial Waste Lagoons (Continued)**

Profile Type	Information Needs	Preliminary Assessment Findings
CSM Profile	Source media	Soil
	Migration routes/release mechanisms	Constituents could migrate from soil to groundwater via desorption and dissolution. Constituents could migrate to surface water due to runoff, dissolution, and adsorption from stormwater and recharge to groundwater.
	Exposure pathways, media, and human receptors	Groundwater flows to the south within this area. Surface water runs across this area and flows into the rip-rap lined stormwater channel in its center that discharges to the west. The facility storm drains discharge to the tributary of Elkhorn Creek, which flows into the Kentucky River, a water source for KAW. AKGWA well records suggest that water wells may be present on the Prestress Services property immediately downgradient from the facility. Therefore, a potential complete exposure pathway for off-post human receptors exists.

**5.2.8 Industrial/Sanitary Waste Landfill Rationale and CSM**

The Industrial/Sanitary Waste Landfill was identified as an AOPI following records reviews, interviews, and aerial photograph review. Based on the time frame of operation and activities at LBAD, it is likely that PFAS-containing materials from metal plating sludge were disposed of in the landfill. The CSM for the Industrial/Sanitary Waste Landfill is summarized in Table 5-9.

The Industrial/Sanitary Waste Landfill was unlined and used between 1950 and 1970. Wastes disposed of in the landfill reportedly contained solvents, metal plating sludge, transformer fluids, sandblasting dust containing chrome, and sewage sludge. Combustible materials were burned at the landfill before burial (Earth Tech 1994). The landfill was closed in 1983 and capped with a clay and soil cover; however, delineation of the landfill boundaries was incomplete and an RFI was needed to delineate the extent of the landfill (Metcalf & Eddy 1994). A landfill cap and cover system complying with both solid waste landfill closure and Federal requirements for hazardous waste landfill closure was constructed over the landfill in October 1995 (SERES 2021). LTM of the landfill is conducted under the Site-wide Long-term Monitoring, Operation and Maintenance Plan for the Waste Management Areas and Vinyl Chloride Plume Monitoring Addendum No. 2 (Shaw 2009).

The PA team conducted a visual inspection of the Industrial/Sanitary Waste Landfill, which is fully vegetated and enclosed by a chain-link fence. A road traverses the landfill in its western portion. Surface water runoff flows to either the west toward the unnamed tributary that borders the west of LBAD or to the south into LBAD’s storm drainage system.

**Table 5-9. AOPI CSM Information Profile – Industrial/Sanitary Waste Landfill**

Profile Type	Information Needs	Preliminary Assessment Findings
Site Profile	AOPI site structures/description	Vegetated and fully enclosed by a chain-link fence.
	Latitude, longitude	38.07984, -84.32448
	Size	15.01
Land Use	Current/future land use	No residential, recreational, commercial, or industrial use permitted.

**Table 5-8. AOPi CSM Information Profile – Industrial/Sanitary Waste Landfill (Continued)**

Profile Type	Information Needs	Preliminary Assessment Findings
CSM Profile	Source media	Soil
	Migration routes/release mechanisms	Constituents could migrate from soil to groundwater via desorption and dissolution. Constituents could migrate to surface water due to runoff, dissolution, and adsorption from stormwater and recharge to groundwater.
	Exposure pathways, media, and human receptors	Groundwater flows to the south within this area. Surface water runs across this area into channels or storm drains to the south or towards the untamed tributary in the west. The facility storm drains discharge to the tributary of Elkhorn Creek, which flows into the Kentucky River, a water source for KAW. AKGWA well records suggest that water wells may be present on the Prestress Services property immediately downgradient from the facility. Therefore, a potential complete exposure pathway for off-post human receptors exists.

**5.2.9 IWTP Drying Beds Rationale and CSM**

The IWTP Drying Beds were identified as an AOPi following records reviews, interviews, and aerial photograph review. The IWTP Drying Beds received sludge from the Building 126 IWTP, which treated wastes from the Building 135 Plating Operations. PFAS-containing mist suppressants were likely used during the plating process given the period of operation of the chrome plating. The CSM for the IWTP Drying Beds is summarized in Table 5-10.

In 1965, an IWTP was constructed for treatment of the wastewater from the Building 135 Plating operations. Sludge generated from the IWTP was pumped across the street from the IWTP to two drying beds located to the north of Building 135. The dried sludge was disposed of on-post at the Industrial/Sanitary Waste Landfill (Ebasco 1990). The drying beds ceased operation in 1976. The drying beds and associated transfer lines were remediated and removed between 1996 and 1997 (Sverdrup 1996).

The PA team conducted a visual inspection of the IWTP Drying Beds area. The area is presently an asphalt parking lot with some grass around the permitted area. The ground surface slopes to the southeast toward storm drains or channels.

**Table 5-10. AOPi CSM Information Profile – IWTP Drying Beds**

Profile Type	Information Needs	Preliminary Assessment Findings
Site Profile	AOPi site structures/description	Presently an asphalt parking lot with grass landscaping along the edges sloping to the southeast.
	Latitude, longitude	38.07834, -84.32618
	Size	0.17
Land Use	Current/future land use	Commercial/Industrial
CSM Profile	Source media	Soil
	Migration routes/release mechanisms	Constituents could migrate from soil to groundwater via desorption and dissolution. Constituents could migrate to surface water due to runoff, dissolution, and adsorption from stormwater and recharge to groundwater.

**Table 5-10. AOPI CSM Information Profile – IWTP Drying Beds (Continued)**

Profile Type	Information Needs	Preliminary Assessment Findings
	Exposure pathways, media, and human receptors	Groundwater flows to the south within this area. Surface water runs across this area into channels or storm drains to the southeast. The facility storm drains discharge to the tributary of Elkhorn Creek, which flows into the Kentucky River, a water source for KAW. AKGWA well records suggest that water wells may be present on the Prestress Services property immediately downgradient from the facility. Therefore, a potential complete exposure pathway for off-post human receptors exists.

**5.2.10 New Landfill Rationale and CSM**

The New Landfill was identified as an AOPI following records reviews, interviews, and aerial photograph review. Based on the time frame of operation and activities at LBAD, it is likely that PFAS-containing materials were disposed of in the landfill. The CSM for the New Landfill is summarized in Table 5-11.

The New Landfill was used between 1971 and 1980. No lining was installed during construction. Wastes buried at the landfill reportedly contained plating waste, paints, infectious waste, and sewage sludge (Earth Tech 1994). During closure, a clay and soil cap was placed over the landfill; however, delineation of the landfill boundaries was incomplete and an RFI was needed to delineate the extent of the landfill (Metcalf & Eddy 1994). A landfill cap and cover system complying with both solid waste landfill closure and Federal requirements for hazardous waste landfill closure was constructed over the landfill in October 1995 (SERES 2021). LTM of the landfill is conducted under the Site-wide Long-term Monitoring, Operation and Maintenance Plan for the Waste Management Areas and Vinyl Chloride Plume Monitoring Addendum No. 2 (Shaw 2009).

The PA team conducted a visual inspection of the New Landfill, which is fully vegetated and enclosed by a chain-link fence. The area is a topographic high for LBAD, and surface water runoff would generally flow to the east, south, or west. Flow to the east would encounter an unnamed tributary that feeds Elkhorn Creek. Flow to the south or west may ultimately encounter the facility storm drainage network, which also feeds Elkhorn Creek.

**Table 5-11. AOPI CSM Information Profile – New Landfill**

Profile Type	Information Needs	Preliminary Assessment Findings
Site Profile	AOPI site structures/description	Vegetated and fully enclosed by a chain-link fence. The area is a topographic high point, and surface water runoff generally flows to the east, south, or west.
	Latitude, longitude	38.08352, -84.30646
	Size	18.39
Land Use	Current/future land use	Capped landfill. No residential, recreational, commercial, or industrial use permitted.
CSM Profile	Source media	Soil
	Migration routes/release mechanisms	Constituents could migrate from soil to groundwater via desorption and dissolution. Constituents could migrate to surface water due to runoff, dissolution, and adsorption from stormwater and recharge to groundwater.

**Table 5-11. AOPi CSM Information Profile – New Landfill (Continued)**

Profile Type	Information Needs	Preliminary Assessment Findings
	Exposure pathways, media, and human receptors	Groundwater flows to the southwest within this area. Surface water generally flows to the east, south, or west, ultimately encountering channels or storm drains that discharge to the southwest of LBAD. A small fraction of surface water would travel east into an unnamed tributary, which also feeds Elkhorn Creek. The facility storm drains discharge to the tributary of Elkhorn Creek, which flows into the Kentucky River, a water source for KAW. AKGWA well records suggest that water wells may be present on the Prestress Services property immediately downgradient from the facility. Therefore, a potential complete exposure pathway for off-post human receptors exists.

### 5.3 DATA LIMITATIONS

The data limitations relevant to the development of this PA for PFAS at LBAD are discussed below.

A comprehensive well survey was not completed as part of this PA; therefore, the information reviewed regarding off-post wells is limited. The EDR well search report (Appendix F) and online databases (KGS 2021) were referenced when identifying potential off-post drinking water receptors.

The searches for ecological receptors and off-post PFAS sources were limited to readily identifiable and available information. An online database was referenced when identifying the ecological profile for the site (USFWS 2021).

Records reviewed during the PA process were limited in information regarding PFAS-containing materials, including historic AFFF use; procurement records of AFFF and documentation of AFFF used during emergency responses or firefighter training activities were not available. Although spill reports, waste and chemical inventories, historical drawings, blueprints, and as-built drawings may have been included in the KDMA onsite Administrative Record, many were not pertinent to the period of Army ownership at LBAD. Generally, interviews are crucial to understanding past practices and identifying the potential for use, storage, or disposal of PFAS-containing materials because records are often not available. Interviews providing anecdotal accounts of AFFF use (and therefore possible PFAS release) were limited at LBAD due to the length of time that the Installation has been closed under BRAC.

The PA was conducted through observation of operational periods, site usage, aerial photographs, records reviews, anecdotal evidence, and personnel interviews to evaluate the likelihood of a release. Therefore, some conclusions and recommendations presented in this report are based on available information, professional judgment, and industry best practices. Multiple sites were eliminated based on the lack of evidence of PFAS-containing chemical use, AFFF use and storage, and dates of operation. PFAS-containing chemicals possibly were used at a variety of sites (e.g., photograph processing facilities, wash racks, vehicle maintenance shops) or at chemical storage facilities, which were not identified as AOPi based on lack of evidence and historical information.

## 6. CONCLUSIONS

This PA was conducted in accordance with DoD, Army and USEPA guidance documents. Programmatically, the Army has focused its PFAS PA efforts to identify locations where a potential for a release of PFAS exists (i.e., those locations where there was use, storage, or disposal of PFAS-containing materials). Locations on Army Installations with the greatest likelihood of releases of PFAS were evaluated as part of this PA, including FTAs, AFFF storage locations, aircraft crash sites, fuel farms, and sites associated with aviation assets. However, other potential sources of PFAS at the Installation were considered and have been documented in this PA. A combination of document review, Internet searches, interviews with Installation personnel, and an Installation site visit were used to identify specific areas of suspected PFAS use and releases at LBAD.

The entire former LBAD installation was assessed, twenty-eight preliminary areas were identified and evaluated for potential use, storage and/or disposal of PFAS-containing materials and were further refined during the PA process then either identified either as an area not retained for further investigation or as an AOPI. In accordance with the established process for the PA/SI, nine of the preliminary areas have been identified as AOPIs.

The AOPIs identified during this PA at LBAD are listed below:

- Building H Plating Operations
- Building 30 Former Fire Station
- Building 105 Fire Distribution System Testing Area
- Building 135 Plating Operations and Building 126 IWTP
- FTA
- Industrial Waste Lagoons
- Industrial/Sanitary Landfill
- IWTP Drying Beds
- New Landfill.

A site-specific CSM was developed for each AOPI based on an assessment of existing records, personnel interviews, and site reconnaissance trips. The CSMs developed for this PA did not identify the AOPIs as presently impacting on-post drinking water receptors. However, the exposure pathway for off-post drinking water receptors is potentially complete for the nine AOPIs.

Given the findings of this PA, the AOPIs presented warrant further evaluation in an SI (40 CFR 300.420(c)).

**APPENDIX A**

**FINAL LBAD INSTALLATION KICKOFF MEETING MINUTES**

**PRELIMINARY ASSESSMENT/SITE INSPECTIONS (PA/SIs) OF PFAS  
AT LEXINGTON BLUEGRASS ARMY DEPOT  
INSTALLATION KICKOFF MEETING MINUTES**

---

**Date/Time:** 19 May 2021/1:00 to 2:00 p.m. EST

**Location:** Virtual Meeting via Webex

**Attendees:**

***Army BRAC Environmental Program***

Mark Brodowicz – BRAC Environmental Coordinator (BEC)

***Kentucky Department of Military Affairs (KDMA)***

Amy Siewert – Environmental Manager

***USACE***

Jake McVay – Project Manager, Baltimore District

Clifford Opdyke – Risk Assessor/Quality Manager, Baltimore District

Rachel Williams – Project Manager, Louisville District

***Leidos Team***

Vasu Peterson – Project Manager

Rupa Price – Deputy Project Manager

Matt Machusick – PFAS Subject Matter Expert/Site Lead

Tim Runkle – Geologist

**1. Introductions**

- a. Vasu Peterson (Leidos) opens the meeting with a welcome and introduces the Army and Leidos teams, stating their roles for the Lexington Bluegrass Army Depot (LBAD) project.

**2. PFAS Sources at Army Installations**

- a. Matt Machusick (Leidos) presents the four primary sources of PFAS identified at Army Installations as well as other minor sources.
- b. Matt further summarizes typical areas of potential interest for aqueous film-forming foam (AFFF).

**3. PA Process Overview – Desktop Research and Site Visit**

- a. Matt summarizes the PA process, including the PA objectives to 1) identify locations where PFAS materials were used, stored, and/or possibly released; 2) evaluate the likelihood for release; and 3) provide a prioritized list of areas of potential interest (AOPIs), where identified.
- b. Consideration will be given to AFFF/PFAS dates of use, storage, and documentation.
- c. Desktop PA research will include collection and review of all available materials, including Leidos' archives; environmental database resources; and any available electronic documents, permits, plans, photographs, and maps that the Army can make available.
- d. The site visit includes review of onsite documentation, interviews with key personnel, and confirmation of desktop review material.

**4. Installation Overview**

- a. Matt describes the facility, including its location, historical use, and operations.

- b. The facility was recommended for closure by BRAC in 1988 with a target date of 1995. By 2006, all BRAC parcels had been transferred.
- c. Prior to 1977, nine wells onsite provided drinking water, but after 1977, water was purchased from municipal authorities.

## 5. Records

- a. Matt explains that the development of the conceptual site model will include components of land use, exposure pathways, and releases.
- b. Some records have been obtained by Leidos from public resources and/or in coordination with Amy Siewert (KDMA) using the onsite repository.

## 6. Site Logistics – Discussion Topics

- a. Amy describes the present site logistics, including the following:
  - i. [REDACTED]
  - ii. The facility has two levels of controlled entry. Personnel requiring access can be issued temporary passes, up to 1 month at a time, for entry to the outer controlled entry area. Day passes can be issued for access to the inner controlled entry area. The Leidos team should work with Amy for scheduling visits. Not all areas are accessible and may require government escorts, and some areas may require special security clearances and advanced notice to access. When accessing the inner controlled entry area, it is best to use government vehicles.
  - iii. Cellular telephones, Apple watches, or GPS-enabled devices are prohibited from use at the facility. If photographs are required, a non-GPS enabled digital camera may be used with advanced clearance; however, the facility will need to review and approve any photographs collected.
  - iv. Amy has access and keys to the former landfill areas and existing monitoring wells.
  - v. COVID policies are changing and the masking requirements will be removed on June 11<sup>th</sup>. Masking is still currently required. Health screening and temperature checks are conducted at the front gate.
  - vi. Amy is available to assist with available working hours; however, some buildings within the inner controlled entry area will not be accessible after 3 or 3:30 p.m. Some grounds crews are able to provide support as escorts; access to the building interiors require an escort.
  - vii. The administrative record is kept onsite. Documents from the 1990s and 2000s are stored in Amy's office, and the past 10 years of documents are stored in the barn. Historical blueprints, which can be digitized, are available. Previously, interns have digitized copies of frequently requested documents. Large maps were not digitized, and the PDFs may be incomplete; however, all paper documents are available. Typically, maps with building numbers are not permitted to be released.
- b. Vasu indicates that Leidos and KDMA have a great start with transmitting files already. Vasu asks if a list of documents that are contained in the Administrative Record exists. Amy explains that no list of documents is contained in the record.
- c. Vasu asks Rachel Williams (USACE, Louisville) if USACE, Louisville District has any historical records or electronic files. Rachel says that she is sure they have quite a few electronic files. Rachel will send the USACE, Louisville District technical lead for LBAD an email and copy Vasu. Dick Kennard is the technical lead.
- d. Vasu asks Mark Brodowicz (BRAC) about historical maps and digital records. Mark explains that it is unlikely that any digital maps exist. All documents he had were sent to Edgewood, Maryland for scanning and entry to the Repository of Army Environmental Documents

- (READ). READ was shut down and is no longer available; however, everything that was sent to READ came from the onsite repository. If a document is not in the onsite repository, one would need to track down the contractor who prepared it. Mark recommends using Google Maps to overlay still existing buildings to try to create a geospatial reference.
- e. Neither Amy nor Mark are aware of the fire training pit location at the facility.
  - f. Vasu asks about current PFAS use at the site. Amy describes a current AFFF system in Building 194. A slow release to the concrete floor of up to 500 gallons of AFFF occurred and details of the release are included in a Tier II report. Portable AFFF units are also in use and stored at the facility.
  - g. Leidos will request copies of these reports and all information related to known use, release, or disposal.
  - h. Vasu asks if we may GPS any of the locations onsite. Amy says it would depend on location. She needs that information upfront to find out and she notes that they utilize blockers to scramble signals so she will need to get advanced approval.

## **7. Preliminary Schedule**

- a. Matt presents the preliminary schedule for the work plan, site visit, and anticipated steps to expect in the near future.

## **8. Open Questions and Discussion**

- a. Mark asks when to expect the draft PA document. Vasu replies that Leidos expects the draft PA will be available during the first half of November. Mark then asks if SI work would happen during this year. Vasu indicates that SI activities would be recommended in the PA. Jake McVay (USACE, Baltimore) adds that the present contract has the capacity to move forward with an SI.
- b. Mark asks if any other Installations are scheduled to have a PA conducted before LBAD. Vasu replies that LBAD is the first proposed in Leidos' Installation priorities; however, the schedule is still under review.
- c. Amy asks if the findings would be reported to state or Federal agencies. Vasu responds that the PA would stay internal and would not go to regulatory agencies until it is final and submitted along with the draft SI Report.
- d. Vasu asks Amy if there has been any public inquiry about PFAS at the facility, and Amy responds that there has not; however, the state agency has conducted a state-wide drinking water study.

Environmental Data Resources, Inc. (EDR) Aerial Photo Decade Package is a screening tool designed to assist environmental professionals in evaluating potential liability on a target property resulting from past activities. EDR's professional researchers provide digitally reproduced historical aerial photographs, and when available, provide one photo per decade.

**APPENDIX E**

**QUESTIONNAIRE RESPONSES AND INTERVIEW NOTES**

## PRELIMINARY ASSESSMENT QUESTIONNAIRE

<b>Property</b>	Bluegrass Station	
<b>Name of Individual Completing the Questionnaire</b>	[REDACTED]	
<b>Title</b>	Environmental Scientist	
<b>Position/Duties at this property</b>	Environmental Management overseeing property and tenants	<b>Years of experience at this property</b> 7

1. Is aqueous film-forming foam (AFFF) currently being used or has it previously been used at this facility?

Yes  No

*If no, please skip to Question 10.*

a. If AFFF is/has been used onsite, when and where is/was it used?

***Currently stored in D, E, G, C, F, and A***

b. What type of AFFF is/has been used at locations within this facility (i.e., 3%, 6%, high- expansion foam)? What manufacturers' AFFF products are/were used at locations within this facility? Please attach copies of the manufacturer's SDS or product information sheet for the AFFF, if available.

***JET-X 2 % High Expansion Foam Concentrate (Bldg G), Chemguard 1% AFFF (Bldg D&E), Chemguard C303 (RMT and TRIMAX AFFF), Chemguard Blizzard (RMT and TRIMAX AFFF), and Chemguard 3% (RMT and TRIMAX AFFF).***

c. Is AFFF currently stored at locations within this facility? If so, where?

***Listed in a above***

d. If AFFF is/was stored onsite, what is/was the volume of the storage tanks/containers? What is the total volume of AFFF typically onsite at any given time?

- ***Building G- 6 each 120 gallon tanks***
- ***Building D- 2 each 500 gallon tanks***
- ***Building D- 2 each 500 gallon tanks***

***Portable Units***

- ***RMT4000- 5 each 240 gallons***
- ***RMT2000- 13 each at 120 gallons***
- ***Trimax30- 7 each at 30 gallons***

***Total Volume- 5720 Gallons***

e. Are AFFF fire extinguishers used onsite? If yes, what size and where are they located?

Yes  No

***See above, reference portable units***

## PRELIMINARY ASSESSMENT QUESTIONNAIRE (Continued)

3. Do the fire suppression systems currently contain AFFF or have they been retrofitted for use of high-expansion foam?

Yes  No

a. If retrofitted, when? N/A

b. Please provide a list of (building name/number, current or demolished) where the fire suppression systems currently contain or formerly contained AFFF?

*Listed in 1a above*

c. What is the testing procedure for the fire suppression systems? Please include frequency and testing methods? Is AFFF used during testing? Provide copies of testing records, if available.

*Systems installed in buildings are inspected/ maintained by the state*

- *Portable units are inspected/ serviced semi-annually by an outside vendor, subcontracted through the LM facilities department*

d. When was the last time the system was tested?

*D and E- January 2021*

*G- August 2019*

e. Is/was AFFF ever released accidentally or intentionally during testing of the system? If yes, please provide dates, quantities, and location of the release.

*High Expansion Foam during initial testing of Building G entered the drains of the oil/water separator inside the building and went to the WWTP on site. The waste was pumped and disposed at a Haz Waste landfill. The contractor that built the building responded to release and used contractor for cleanup in 2019. The foam combined with the sewage waste and sludge around 60,000 gallons.*

6. If a release of AFFF occurs/occurred, how is/was the release cleaned and disposed of?

*See 3e above*

8. Do you have anecdotes/recollection and/or records of the following? Please provide details on any "yes" responses.

Yes  No  a. Fuel spills and emergency response logs? Please provide logs, if available.

Yes  No  b. AFFF being used as a precaution in response to fuel releases to prevent fires? If yes, please provide dates, locations, and volume of AFFF released.

Yes  No  c. Historical emergency response sites (e.g., fires) where AFFF was used? If yes, please provide dates, locations and volume of AFFF released.

Yes  No  d. Accidental release of AFFF from a fire suppression system, AFFF storage tank/container, or pump and piping? If yes, please provide dates, locations, and volume of AFFF released.

*2020- Building D, 315 gallons leaked from a foam bladder. Hardened foam was cleaned up and disposed, but unknown how much permeated concrete floor.*

## PRELIMINARY ASSESSMENT QUESTIONNAIRE (Continued)

10. How many fire training areas are located at this facility (active and/or inactive)?	1
a. For inactive/former fire training areas, during what timeframe was the fire training area(s) in active use? <i>I just found out through this process one existed, but I have no information on the area.</i>	
b. What types of fuels/flammables were used at the fire training areas? <i>Unknown</i>	
a. Was AFFF used during training exercises? <i>Unknown</i> Yes <input type="checkbox"/> No <input type="checkbox"/>	
d. Where are/were the fire training areas located? <i>Unknown</i>	
11. What is the nearest fire station that responds to emergencies at the facility? <i>Building 19 on location</i>	
a. Does the fire station use AFFF in their trucks and/or equipment? Yes <input checked="" type="checkbox"/> No <input type="checkbox"/>	
b. Has the fire department ever discharged AFFF at your facility? If yes, please provide dates and details of the event. Yes <input type="checkbox"/> No <input checked="" type="checkbox"/>	
12. Are there any wells at the facility? This would include potable water wells, landscaping wells, monitoring wells, injection wells, dry wells, geothermal wells, etc. Yes <input checked="" type="checkbox"/> No <input type="checkbox"/> If yes, please provide information on the location, depth, status and usage of each well.	
15. Are any processes or operations conducted that would have used or produced industrial surfactants, resins, molds, plastics (e.g., manufacture of plastics, fluoropolymers, rubber, and compression mold release coatings and/or plumbing flux agents, fluoroplastic coatings, composite resins, and flame retardant for polycarbonate)? Yes <input type="checkbox"/> No <input checked="" type="checkbox"/> If yes, at which location and during what timeframe?	
19. Are/were there any laundry or dry-cleaning facilities onsite? Yes <input type="checkbox"/> No <input checked="" type="checkbox"/> If yes, where are these located?	
20. Are/were there any vehicle washing facilities onsite? Yes <input checked="" type="checkbox"/> No <input type="checkbox"/> If yes, where are these located? <i>Building 345, old one located in back 40 near New Landfill</i>	

## PRELIMINARY ASSESSMENT QUESTIONNAIRE (Continued)

22. Are you aware of any other activities or processes that may have utilized PFAS-containing materials?

Yes  No  If yes, what activities and where are/were these located?

23. Is there anyone else that you recommend to be interviewed?

Yes  No  If yes, please provide contact information for these individuals.

**Interview Form**

<b>Facility</b>	Lexington Fire Department	
<b>Name</b>	[REDACTED]	
<b>Title</b>	Administrative	
<b>Position/Duties at this facility</b>	Administrative Record Keeping	<b>Years of experience at this facility and date range</b> Since 1996

1. Were there onsite fire training activities?

2. Where are the fire training areas?

3. How were fires responded to?

4. Is AFFF used in fire suppression systems in any of the buildings?

5. Do you know of any AFFF storage areas, uses, or releases?

6. Were there chrome plating operations?

7. Were there any WWTPs or landfills onsite?

8. What industrial operations were present onsite?

9. What were the standard disposal practices of chemicals used onsite?

**Notes:**

[REDACTED] explained that specific inquiries would need to be process through a right to know request. The fire department staff are fairly young. Most have not been working with the department during the period of time that the LBAD facility was operational. [REDACTED] suggested speaking with their public affairs/media person at 859-231-5641.

**Notes:**

## Interview Form

<b>Facility</b>	Lexington Fire Department – LBAD Station	
<b>Name</b>	[REDACTED]	
<b>Title</b>		
<b>Position/Duties at this facility</b>	Fire Fighter	<b>Years of experience at this facility and date range</b> Since 2005

1. Were there onsite fire training activities?

Yes.

2. Where are the fire training areas?

FD had frequently tested equipment outside of current fire station in the grass areas (Building 19, former locomotive shop). FD used open field outside of gate 5 for training in the past.

3. How were fires responded to?

FD station services LBAD and surrounding area as a regional station for the Lexington Fire Department.

4. Is AFFF used in fire suppression systems in any of the buildings?

NA

5. Do you know of any AFFF storage areas, uses, or releases?

Building 23 holds 55-gal drums of AFFF stored/used by the fire department. 16 poly drums presently stored in Building 23 on concrete slab, about half are empty. Drums are labeled Chemguard 3% AFFF, some with L3 writing on the drum as the delivered to on the address labels.

FD would service the SOFSA RTMs and discharge the AFFF in the fields around the SOFSA hangars.

Fire occurred during 2005 in the old buildings 100/101. Fire lasted for 2 days and used 100,000-gals of water and AFFF was applied.

6. Were there chrome plating operations?

NA

7. Were there any WWTPs or landfills onsite?

NA

8. What industrial operations were present onsite?

NA

9. What were the standard disposal practices of chemicals used onsite?

NA

**Notes:**

██████████ indicated that he began working with the Lexington FD in 2005 when the current fire station at LBAD was renovated. He is the longest serving member of the Lexington FD crew which uses the LBAD station.

## Interview Form

<b>Facility</b>	Building 221	
<b>Name</b>	[REDACTED]	
<b>Title</b>	Floor Supervisor	
<b>Position/Duties at this facility</b>	Floor Supervisor	<b>Years of experience at this facility and date range</b> Since January 1986

1. Were there onsite fire training activities?
2. Where are the fire training areas?
3. How were fires responded to?
4. Is AFFF used in fire suppression systems in any of the buildings?
5. Do you know of any AFFF storage areas, uses, or releases?
6. Were there chrome plating operations?
7. Were there any WWTPs or landfills onsite?
8. What industrial operations were present onsite?
9. What were the standard disposal practices of chemicals used onsite?

**Notes:**

Timothy Runkle interviewed [REDACTED] who has been working as a contractor at the Facility since January 1986 and presently works for [REDACTED] as the floor supervisor in Building 221. Previously [REDACTED] had worked in a building across from the former fire training area and recalls the burning of wood pallets at the fire training area. [REDACTED] conveyed that he is not aware of AFFF used at the facility during Army ownership and that the building's fire suppression systems were water sprinklers or halon. Indicated that the foam containing tanks on the historic master plan maps for building 221 was where foam packaging for shipping was manufactured. He does not recall exact tanks. A fire did occur in building 221 around 2008 and 2009 in the gun range area and water was used to extinguish the fire.

### SURROUNDING SITES: SEARCH RESULTS

Surrounding sites were identified in the following databases.

Elevations have been determined from the USGS Digital Elevation Model and should be evaluated on a relative (not an absolute) basis. Relative elevation information between sites of close proximity should be field verified. Sites with an elevation equal to or higher than the target property have been differentiated below from sites with an elevation lower than the target property. Page numbers and map identification numbers refer to the EDR Radius Map report where detailed data on individual sites can be reviewed.

Sites listed in ***bold italics*** are in multiple databases.

Unmappable (orphan) sites are not considered in the foregoing analysis.

## EXECUTIVE SUMMARY

### STANDARD ENVIRONMENTAL RECORDS

#### ***Federal CERCLIS NFRAP site list***

SEMS-ARCHIVE: SEMS-ARCHIVE (Superfund Enterprise Management System Archive) tracks sites that have no further interest under the Federal Superfund Program based on available information. The list was formerly known as the CERCLIS-NFRAP, renamed to SEMS ARCHIVE by the EPA in 2015. EPA may perform a minimal level of assessment work at a site while it is archived if site conditions change and/or new information becomes available. Archived sites have been removed and archived from the inventory of SEMS sites. Archived status indicates that, to the best of EPA's knowledge, assessment at a site has been completed and that EPA has determined no further steps will be taken to list the site on the National Priorities List (NPL), unless information indicates this decision was not appropriate or other considerations require a recommendation for listing at a later time. The decision does not necessarily mean that there is no hazard associated with a given site; it only means that, based upon available information, the location is not judged to be potential NPL site.

A review of the SEMS-ARCHIVE list, as provided by EDR, and dated 12/30/2020 has revealed that there is 1 SEMS-ARCHIVE site within approximately 2 miles of the target property.

#### ***Federal RCRA CORRACTS facilities list***

CORRACTS: CORRACTS is a list of handlers with RCRA Corrective Action Activity. This report shows which nationally-defined corrective action core events have occurred for every handler that has had corrective action activity.

A review of the CORRACTS list, as provided by EDR, and dated 12/14/2020 has revealed that there are 2 CORRACTS sites within approximately 2 miles of the target property.

#### ***Federal RCRA generators list***

RCRA-LQG: RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or

## EXECUTIVE SUMMARY

dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Large quantity generators (LQGs) generate over 1,000 kilograms (kg) of hazardous waste, or over 1 kg of acutely hazardous waste per month.

A review of the RCRA-LQG list, as provided by EDR, and dated 12/14/2020 has revealed that there is 1 RCRA-LQG site within approximately 2 miles of the target property.

RCRA-VSQG: RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Very small quantity generators (VSQGs) generate less than 100 kg of hazardous waste, or less than 1 kg of acutely hazardous waste per month.

A review of the RCRA-VSQG list, as provided by EDR, and dated 12/14/2020 has revealed that there is 1 RCRA-VSQG site within approximately 2 miles of the target property.

### ***Federal institutional controls / engineering controls registries***

US INST CONTROLS: A listing of sites with institutional controls in place. Institutional controls include administrative measures, such as groundwater use restrictions, construction restrictions, property use restrictions, and post remediation care requirements intended to prevent exposure to contaminants remaining on site. Deed restrictions are generally required as part of the institutional controls.

A review of the US INST CONTROLS list, as provided by EDR, and dated 10/28/2020 has revealed that there is 1 US INST CONTROLS site within approximately 2 miles of the target property.

### ***State- and tribal - equivalent CERCLIS***

KY SHWS: The State Hazardous Waste Sites records are the states' equivalent to CERCLIS. These sites may or may not already be listed on the federal CERCLIS list. Priority sites planned for cleanup using state funds (state equivalent of Superfund) are identified along with sites where cleanup will be paid for by potentially responsible parties. The data come from the Department of Environmental Protection's Uncontrolled Site Branch List.

A review of the KY SHWS list, as provided by EDR, and dated 02/09/2021 has revealed that there are 2

### **State and tribal Brownfields sites**

KY BROWNFIELDS: The Kentucky Brownfield Program has created an inventory of brownfield sites in order to market the properties to those interested in brownfield redevelopment. The Kentucky Brownfield Program is working to promote the redevelopment of these sites by helping to remove barriers that prevent reuse, providing useful information to communities, developers and the public and encouraging a climate that fosters redevelopment of contaminated sites.

A review of the KY BROWNFIELDS list, as provided by EDR, and dated 01/13/2021 has revealed that there is 1 KY BROWNFIELDS site within approximately 2 miles of the target property.

### **Other Ascertainable Records**

RCRA NonGen / NLR: RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Non-Generators do not presently generate hazardous waste.

A review of the RCRA NonGen / NLR list, as provided by EDR, and dated 12/14/2020 has revealed that there are 5 RCRA NonGen / NLR sites within approximately 2 miles of the target property.

## EXECUTIVE SUMMARY

**2020 COR ACTION:** The EPA has set ambitious goals for the RCRA Corrective Action program by creating the 2020 Corrective Action Universe. This RCRA cleanup baseline includes facilities expected to need corrective action. The 2020 universe contains a wide variety of sites. Some properties are heavily contaminated while others were contaminated but have since been cleaned up. Still others have not been fully investigated yet, and may require little or no remediation. Inclusion in the 2020 Universe does not necessarily imply failure on the part of a facility to meet its RCRA obligations.

A review of the 2020 COR ACTION list, as provided by EDR, and dated 09/30/2017 has revealed that there is 1 2020 COR ACTION site within approximately 2 miles of the target property.

**TRIS:** The Toxic Chemical Release Inventory System identifies facilities that release toxic chemicals to the air, water, and land in reportable quantities under SARA Title III, Section 313. The source of this database is the U.S. EPA.

A review of the TRIS list, as provided by EDR, and dated 12/31/2018 has revealed that there is 1 TRIS site within approximately 1 mile of the target property.

<u>Lower Elevation</u>	<u>Address</u>	<u>Direction / Distance</u>	<u>Map ID</u>	<u>Page</u>

**US AIRS:** The database is a sub-system of Aerometric Information Retrieval System (AIRS). AFS contains compliance data on air pollution point sources regulated by the U.S. EPA and/or state and local air regulatory agencies. This information comes from source reports by various stationary sources of air pollution, such as electric power plants, steel mills, factories, and universities, and provides information about the air pollutants they produce. Action, air program, air program pollutant, and general level plant data. It is used to track emissions and compliance data from industrial plants.

A review of the US AIRS list, as provided by EDR, has revealed that there is 1 US AIRS site within approximately 1 mile of the target property.

**FINDS:** The Facility Index System contains both facility information and "pointers" to other sources of information that contain more detail. These include: RCRIS; Permit Compliance System (PCS); Aerometric Information Retrieval System (AIRS); FATES (FIFRA [Federal Insecticide Fungicide Rodenticide Act] and TSCA Enforcement System, FTTS [FIFRA/TSCA Tracking System]; CERCLIS; DOCKET (Enforcement Docket used to manage and track information on civil judicial enforcement cases for all environmental statutes); Federal Underground Injection Control (FURS); Federal Reporting Data System (FRDS); Surface Impoundments (SIA); TSCA Chemicals in Commerce Information System (CICS); PADS; RCRA-J (medical waste transporters/disposers); TRIS; and TSCA. The source of this database is the U.S. EPA/NTIS.

A review of the FINDS list, as provided by EDR, and dated 02/03/2021 has revealed that there are 14

Environmental Interest/Information System:

US National Pollutant Discharge Elimination System (NPDES) module of the Compliance Information System (ICIS) tracks surface water permits issued under the Clean Water Act. Under NPDES, all facilities that discharge pollutants from any point source into waters of the United States are required to obtain a permit. The permit will likely contain limits on what can be discharged, impose monitoring and reporting requirements, and include other provisions to ensure that the discharge does not adversely affect water quality.

issued under the Clean Water Act. Under NPDES, all facilities that discharge pollutants from any point source into waters of the United States are required to obtain a permit. The permit will likely contain limits on what can be discharged, impose monitoring and reporting requirements, and include other provisions to ensure that the discharge does not adversely affect water quality. RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

**PRESTRESS SERVICES INDUSTRIES LLC-LEXINGTON BRANCH (Continued)**

**1014241884**

US EPA TRIS (Toxics Release Inventory System) contains information from facilities on the amounts of over 300 listed toxic chemicals that these facilities release directly to air, water, land, or that are transported off-site.

US National Pollutant Discharge Elimination System (NPDES) module of the Compliance Information System (ICIS) tracks surface water permits issued under the Clean Water Act. Under NPDES, all facilities that discharge pollutants from any point source into waters of the United States are required to obtain a permit. The permit will likely contain limits on what can be discharged, impose monitoring and reporting requirements, and include other provisions to ensure that the discharge does not adversely affect water quality.

Environmental Interest/Information System:

US Base Realignment and Closure (BRAC) is a process used to close excess military installations and realign the total asset inventory in order to save money on operations and maintenance.  
FEDERAL FACILITY HAZARDOUS WASTE DOCKET  
RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

US EPA Assessment, Cleanup and Redevelopment Exchange System (ACRES) is an federal online database for Brownfields Grantees to electronically submit data directly to EPA.  
HAZARDOUS WASTE BIENNIAL REPORTER

Registry ID: 110000793525

Click Here:

Environmental Interest/Information System:

NCDB (National Compliance Data Base) supports implementation of the Federal Insecticide, Fungicide, and Rodenticide Act (FIFRA) and the Toxic Substances Control Act (TSCA). The system tracks inspections in regions and states with cooperative agreements, enforcement actions, and settlements.

AFS (Aerometric Information Retrieval System (AIRS) Facility Subsystem) replaces the former Compliance Data System (CDS), the National Emission Data System (NEDS), and the Storage and Retrieval of Aerometric Data (SAROAD). AIRS is the national repository for information concerning airborne pollution in the United States. AFS is used to track emissions and compliance data from industrial plants. AFS data are utilized by states to prepare State Implementation Plans to comply with regulatory programs and by EPA as an input for the estimation of total national emissions. AFS is undergoing a major redesign to support facility operating permits required under Title V of the Clean Air Act.

AIR SYNTHETIC MINOR  
COMMUNITY WATER SYSTEM

US EPA TRIS (Toxics Release Inventory System) contains information from facilities on the amounts of over 300 listed toxic chemicals that these facilities release directly to air, water, land, or that are transported off-site.

US National Pollutant Discharge Elimination System (NPDES) module of the Compliance Information System (ICIS) tracks surface water permits issued under the Clean Water Act. Under NPDES, all facilities that discharge pollutants from any point source into waters of the United States are required to obtain a permit. The permit will likely contain limits on what can be discharged, impose monitoring and reporting requirements, and include other provisions to ensure that the discharge does not adversely affect water quality.

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Environmental Interest/Information System:

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Environmental Interest/Information System:  
 US National Pollutant Discharge Elimination System (NPDES) module of the Compliance Information System (ICIS) tracks surface water permits issued under the Clean Water Act. Under NPDES, all facilities that discharge pollutants from any point source into waters of the United States are required to obtain a permit. The permit will likely contain limits on what can be discharged, impose monitoring and reporting requirements, and include other provisions to ensure that the discharge does not adversely affect water quality.

Environmental Interest/Information System:

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

US National Pollutant Discharge Elimination System (NPDES) module of the Compliance Information System (ICIS) tracks surface water permits issued under the Clean Water Act. Under NPDES, all facilities that discharge pollutants from any point source into waters of the United States are required to obtain a permit. The permit will likely contain limits on what can be discharged, impose monitoring and reporting requirements, and include other provisions to ensure that the discharge does not adversely affect water quality.

Environmental Interest/Information System:

AFS (Aerometric Information Retrieval System (AIRS) Facility Subsystem) replaces the former Compliance Data System (CDS), the National Emission Data System (NEDS), and the Storage and Retrieval of Aerometric Data (SAROAD). AIRS is the national repository for information concerning airborne pollution in the United States. AFS is used to track emissions and compliance data from industrial plants. AFS data are utilized by states to prepare State Implementation Plans to comply with regulatory programs and by EPA as an input for the estimation of total national emissions. AFS is undergoing a major redesign to support facility operating permits required under Title V of the Clean Air Act.

Closed TANK NON-REGISTRATION; STORMWATER 04 Shoa, Massoud 09/12/2008 2008-09-12 14:40:16 Complainant states that a company is using a site to store jet fuel and "they are using tanker trucks as permanent storage units with some sort of flimsy and very shallow containment dike beneath the tankers. Two of the side walls in the containment structure are flat and the total capacity is likely insufficient anyway if they have a big leak." Complainant is concerned with spill containment/storm water management problems with the existing setup.

Aerometric Data (SAROAD). AIRS is the national repository for information concerning airborne pollution in the United States. AFS is used to track emissions and compliance data from industrial plants. AFS data are utilized by states to prepare State Implementation Plans to comply with regulatory programs and by EPA as an input for the estimation of total national emissions. AFS is undergoing a major redesign to support facility operating permits required under Title V of the Clean Air Act.

Dispatch Description: dust in air and neighborhood and tracking onto rd from Avon in lexington on Briarhill Rd. It is white lime dust. they use controls in the mornings, but, stop in the afternoon and trucks make dust fly everywhere. complainant says they the neighborhoods have complained before, but, they never saw or knew of EPA inspecting or making them stop spreading the white dust.  
  
Source Name: Prestress Services Inc (AI ID: 1088)  
Source Address: caller did not know how to give direction except to take 64 to lexington and find briarhill where the Avon company is located. AI for Avon shows that Briar Hill and Avon is actually in paris, Bourbon county, so not sure which county to put down. may have to change later.

Environmental Interest/Information System:

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

# GOVERNMENT RECORDS SEARCHED / DATA CURRENCY TRACKING

To maintain currency of the following federal and state databases, EDR contacts the appropriate governmental agency on a monthly or quarterly basis, as required.

**Number of Days to Update:** Provides confirmation that EDR is reporting records that have been updated within 90 days from the date the government agency made the information available to the public.

## **STANDARD ENVIRONMENTAL RECORDS**

### ***Federal NPL site list***

#### **NPL: National Priority List**

National Priorities List (Superfund). The NPL is a subset of CERCLIS and identifies over 1,200 sites for priority cleanup under the Superfund Program. NPL sites may encompass relatively large areas. As such, EDR provides polygon coverage for over 1,000 NPL site boundaries produced by EPA's Environmental Photographic Interpretation Center (EPIC) and regional EPA offices.

Date of Government Version: 12/30/2020	Source: EPA
Date Data Arrived at EDR: 01/14/2021	Telephone: N/A
Date Made Active in Reports: 02/09/2021	Last EDR Contact: 05/03/2021
Number of Days to Update: 26	Next Scheduled EDR Contact: 07/12/2021
	Data Release Frequency: Quarterly

#### **Proposed NPL: Proposed National Priority List Sites**

A site that has been proposed for listing on the National Priorities List through the issuance of a proposed rule in the Federal Register. EPA then accepts public comments on the site, responds to the comments, and places on the NPL those sites that continue to meet the requirements for listing.

Date of Government Version: 12/30/2020	Source: EPA
Date Data Arrived at EDR: 01/14/2021	Telephone: N/A
Date Made Active in Reports: 02/09/2021	Last EDR Contact: 05/03/2021
Number of Days to Update: 26	Next Scheduled EDR Contact: 07/12/2021
	Data Release Frequency: Quarterly

#### **NPL LIENS: Federal Superfund Liens**

Federal Superfund Liens. Under the authority granted the USEPA by CERCLA of 1980, the USEPA has the authority to file liens against real property in order to recover remedial action expenditures or when the property owner received notification of potential liability. USEPA compiles a listing of filed notices of Superfund Liens.

## ***Federal Delisted NPL site list***

Delisted NPL: National Priority List Deletions

The National Oil and Hazardous Substances Pollution Contingency Plan (NCP) establishes the criteria that the EPA uses to delete sites from the NPL. In accordance with 40 CFR 300.425.(e), sites may be deleted from the NPL where no further response is appropriate.

Date of Government Version: 12/30/2020

## ***Federal CERCLIS list***

FEDERAL FACILITY: Federal Facility Site Information listing

A listing of National Priority List (NPL) and Base Realignment and Closure (BRAC) sites found in the Comprehensive Environmental Response, Compensation and Liability Information System (CERCLIS) Database where EPA Federal Facilities Restoration and Reuse Office is involved in cleanup activities.

Date of Government Version: 04/03/2019

Data Release Frequency: Varies

SEMS: Superfund Enterprise Management System

SEMS (Superfund Enterprise Management System) tracks hazardous waste sites, potentially hazardous waste sites, and remedial activities performed in support of EPA's Superfund Program across the United States. The list was formerly known as CERCLIS, renamed to SEMS by the EPA in 2015. The list contains data on potentially hazardous waste sites that have been reported to the USEPA by states, municipalities, private companies and private persons, pursuant to Section 103 of the Comprehensive Environmental Response, Compensation, and Liability Act (CERCLA). This dataset also contains sites which are either proposed to or on the National Priorities List (NPL) and the sites which are in the screening and assessment phase for possible inclusion on the NPL.

Data Release Frequency: Quarterly

## ***Federal CERCLIS NFRAP site list***

SEMS-ARCHIVE: Superfund Enterprise Management System Archive

# GOVERNMENT RECORDS SEARCHED / DATA CURRENCY TRACKING

SEMS-ARCHIVE (Superfund Enterprise Management System Archive) tracks sites that have no further interest under the Federal Superfund Program based on available information. The list was formerly known as the CERCLIS-NFRAP, renamed to SEMS ARCHIVE by the EPA in 2015. EPA may perform a minimal level of assessment work at a site while it is archived if site conditions change and/or new information becomes available. Archived sites have been removed and archived from the inventory of SEMS sites. Archived status indicates that, to the best of EPA's knowledge, assessment at a site has been completed and that EPA has determined no further steps will be taken to list the site on the National Priorities List (NPL), unless information indicates this decision was not appropriate or other considerations require a recommendation for listing at a later time. The decision does not necessarily mean that there is no hazard associated with a given site; it only means that, based upon available information, the location is not judged to be potential NPL site.

Date of Government Version: 12/30/2020	Source: EPA
Date Data Arrived at EDR: 01/14/2021	Telephone: 800-424-9346
Date Made Active in Reports: 02/18/2021	Last EDR Contact: 05/03/2021

	Data Release Frequency: Quarterly

## ***Federal RCRA CORRACTS facilities list***

CORRACTS: Corrective Action Report

CORRACTS identifies hazardous waste handlers with RCRA corrective action activity.

Date of Government Version: 12/14/2020	Source: EPA
Date Data Arrived at EDR: 12/17/2020	Telephone: 800-424-9346
Date Made Active in Reports: 12/22/2020	Last EDR Contact: 03/23/2021
Number of Days to Update: 5	Next Scheduled EDR Contact: 07/05/2021
	Data Release Frequency: Quarterly

## ***Federal RCRA non-CORRACTS TSD facilities list***

RCRA-TSDF: RCRA - Treatment, Storage and Disposal

RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Transporters are individuals or entities that move hazardous waste from the generator offsite to a facility that can recycle, treat, store, or dispose of the waste. TSDFs treat, store, or dispose of the waste.

Date of Government Version: 12/14/2020	Source: Environmental Protection Agency
Date Data Arrived at EDR: 12/17/2020	Telephone: (404) 562-8651
Date Made Active in Reports: 12/22/2020	Last EDR Contact: 03/23/2021
Number of Days to Update: 5	Next Scheduled EDR Contact: 07/05/2021
	Data Release Frequency: Quarterly

## ***Federal RCRA generators list***

RCRA-LQG: RCRA - Large Quantity Generators

RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Large quantity generators (LQGs) generate over 1,000 kilograms (kg) of hazardous waste, or over 1 kg of acutely hazardous waste per month.

Date of Government Version: 12/14/2020	Source: Environmental Protection Agency
Date Data Arrived at EDR: 12/17/2020	Telephone: (404) 562-8651
Date Made Active in Reports: 12/22/2020	Last EDR Contact: 03/23/2021
Number of Days to Update: 5	Next Scheduled EDR Contact: 07/05/2021
	Data Release Frequency: Quarterly

## GOVERNMENT RECORDS SEARCHED / DATA CURRENCY TRACKING

### RCRA-SQG: RCRA - Small Quantity Generators

RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Small quantity generators (SQGs) generate between 100 kg and 1,000 kg of hazardous waste per month.

Date of Government Version: 12/14/2020	Source: Environmental Protection Agency
Date Data Arrived at EDR: 12/17/2020	Telephone: (404) 562-8651
Date Made Active in Reports: 12/22/2020	Last EDR Contact: 03/23/2021
Number of Days to Update: 5	Next Scheduled EDR Contact: 07/05/2021
	Data Release Frequency: Quarterly

### RCRA-VSQG: RCRA - Very Small Quantity Generators (Formerly Conditionally Exempt Small Quantity Generators)

RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Very small quantity generators (VSQGs) generate less than 100 kg of hazardous waste, or less than 1 kg of acutely hazardous waste per month.

Date of Government Version: 12/14/2020	Source: Environmental Protection Agency
Date Data Arrived at EDR: 12/17/2020	Telephone: (404) 562-8651
Date Made Active in Reports: 12/22/2020	Last EDR Contact: 03/23/2021
Number of Days to Update: 5	Next Scheduled EDR Contact: 07/05/2021
	Data Release Frequency: Quarterly

### ***Federal institutional controls / engineering controls registries***

#### LUCIS: Land Use Control Information System

LUCIS contains records of land use control information pertaining to the former Navy Base Realignment and Closure properties.

Date of Government Version: 02/09/2021	Source: Department of the Navy
Date Data Arrived at EDR: 02/11/2021	Telephone: 843-820-7326
Date Made Active in Reports: 03/22/2021	Last EDR Contact: 05/05/2021
Number of Days to Update: 39	Next Scheduled EDR Contact: 08/23/2021
	Data Release Frequency: Varies

#### US ENG CONTROLS: Engineering Controls Sites List

A listing of sites with engineering controls in place. Engineering controls include various forms of caps, building foundations, liners, and treatment methods to create pathway elimination for regulated substances to enter environmental media or effect human health.

Date of Government Version: 10/28/2020	Source: Environmental Protection Agency
Date Data Arrived at EDR: 11/05/2020	Telephone: 703-603-0695
Date Made Active in Reports: 11/18/2020	Last EDR Contact: 02/23/2021
Number of Days to Update: 13	Next Scheduled EDR Contact: 06/06/2021
	Data Release Frequency: Varies

#### US INST CONTROLS: Institutional Controls Sites List

A listing of sites with institutional controls in place. Institutional controls include administrative measures, such as groundwater use restrictions, construction restrictions, property use restrictions, and post remediation care requirements intended to prevent exposure to contaminants remaining on site. Deed restrictions are generally required as part of the institutional controls.

Date of Government Version: 10/28/2020	Source: Environmental Protection Agency
Date Data Arrived at EDR: 11/05/2020	Telephone: 703-603-0695
Date Made Active in Reports: 11/18/2020	Last EDR Contact: 02/23/2021
Number of Days to Update: 13	Next Scheduled EDR Contact: 06/06/2021
	Data Release Frequency: Varies

# GOVERNMENT RECORDS SEARCHED / DATA CURRENCY TRACKING

## ***Federal ERNS list***

### **ERNS: Emergency Response Notification System**

Emergency Response Notification System. ERNS records and stores information on reported releases of oil and hazardous substances.

Date of Government Version: 12/14/2020  
Date Data Arrived at EDR: 12/15/2020  
Date Made Active in Reports: 12/22/2020  
Number of Days to Update: 7

Data Release Frequency: Quarterly

## ***State- and tribal - equivalent CERCLIS***

### **SHWS: State Leads List**

State Hazardous Waste Sites. State hazardous waste site records are the states' equivalent to CERCLIS. These sites may or may not already be listed on the federal CERCLIS list. Priority sites planned for cleanup using state funds (state equivalent of Superfund) are identified along with sites where cleanup will be paid for by potentially responsible parties. Available information varies by state.

Date of Government Version: 02/09/2021  
Date Data Arrived at EDR: 02/11/2021  
Date Made Active in Reports: 02/17/2021  
Number of Days to Update: 6

Data Release Frequency: Quarterly

## ***State and tribal landfill and/or solid waste disposal site lists***

### **SWF/LF: Solid Waste Facilities List**

Solid Waste Facilities/Landfill Sites. SWF/LF type records typically contain an inventory of solid waste disposal facilities or landfills in a particular state. Depending on the state, these may be active or inactive facilities or open dumps that failed to meet RCRA Subtitle D Section 4004 criteria for solid waste landfills or disposal sites.

Date of Government Version: 12/01/2020

## ***State and tribal leaking storage tank lists***

### **PSTEAF: Facility Ranking List**

The Underground Storage Tank Branch (USTB) has ranked all PSTEAF reimbursable facilities requiring corrective action, in accordance with 401 KAR 42:290. Directive letters will be issued on the basis of facility ranking and available PSTEAF funding in sequential order as ranked. For example, Rank 2 facilities will be issued directives before Rank 3 facilities.

Date of Government Version: 12/01/2021

# GOVERNMENT RECORDS SEARCHED / DATA CURRENCY TRACKING

## ADDITIONAL ENVIRONMENTAL RECORDS

### **Local Brownfield lists**

#### US BROWNFIELDS: A Listing of Brownfields Sites

Brownfields are real property, the expansion, redevelopment, or reuse of which may be complicated by the presence or potential presence of a hazardous substance, pollutant, or contaminant. Cleaning up and reinvesting in these properties takes development pressures off of undeveloped, open land, and both improves and protects the environment. Assessment, Cleanup and Redevelopment Exchange System (ACRES) stores information reported by EPA Brownfields grant recipients on brownfields properties assessed or cleaned up with grant funding as well as information on Targeted Brownfields Assessments performed by EPA Regions. A listing of ACRES Brownfield sites is obtained from Cleanups in My Community. Cleanups in My Community provides information on Brownfields properties for which information is reported back to EPA, as well as areas served by Brownfields grant programs.

Date of Government Version: 12/11/2020	Source: Environmental Protection Agency

### US CDL: Clandestine Drug Labs

A listing of clandestine drug lab locations. The U.S. Department of Justice ("the Department") provides this web site as a public service. It contains addresses of some locations where law enforcement agencies reported they found chemicals or other items that indicated the presence of either clandestine drug laboratories or dumpsites. In most cases, the source of the entries is not the Department, and the Department has not verified the entry and does not guarantee its accuracy. Members of the public must verify the accuracy of all entries by, for example, contacting local law enforcement and local health departments.

Date of Government Version: 12/07/2020  
Date Data Arrived at EDR: 12/09/2020

	Data Release Frequency: Quarterly

### EPA WATCH LIST: EPA WATCH LIST

EPA maintains a "Watch List" to facilitate dialogue between EPA, state and local environmental agencies on enforcement matters relating to facilities with alleged violations identified as either significant or high priority. Being on the Watch List does not mean that the facility has actually violated the law only that an investigation by EPA or a state or local environmental agency has led those organizations to allege that an unproven violation has in fact occurred. Being on the Watch List does not represent a higher level of concern regarding the alleged violations that were detected, but instead indicates cases requiring additional dialogue between EPA, state and local agencies - primarily because of the length of time the alleged violation has gone unaddressed or unresolved.

Date of Government Version: 08/30/2013	Source: Environmental Protection Agency
Date Data Arrived at EDR: 03/21/2014	Telephone: 617-520-3000
Date Made Active in Reports: 06/17/2014	Last EDR Contact: 04/30/2021
Number of Days to Update: 88	Next Scheduled EDR Contact: 08/16/2021
	Data Release Frequency: Quarterly

### 2020 COR ACTION: 2020 Corrective Action Program List

The EPA has set ambitious goals for the RCRA Corrective Action program by creating the 2020 Corrective Action Universe. This RCRA cleanup baseline includes facilities expected to need corrective action. The 2020 universe contains a wide variety of sites. Some properties are heavily contaminated while others were contaminated but have since been cleaned up. Still others have not been fully investigated yet, and may require little or no remediation. Inclusion in the 2020 Universe does not necessarily imply failure on the part of a facility to meet its RCRA obligations.

Date of Government Version: 09/30/2017	Source: Environmental Protection Agency

## RMP: Risk Management Plans

# GOVERNMENT RECORDS SEARCHED / DATA CURRENCY TRACKING

When Congress passed the Clean Air Act Amendments of 1990, it required EPA to publish regulations and guidance for chemical accident prevention at facilities using extremely hazardous substances. The Risk Management Program Rule (RMP Rule) was written to implement Section 112(r) of these amendments. The rule, which built upon existing industry codes and standards, requires companies of all sizes that use certain flammable and toxic substances to develop a Risk Management Program, which includes a(n): Hazard assessment that details the potential effects of an accidental release, an accident history of the last five years, and an evaluation of worst-case and alternative accidental releases; Prevention program that includes safety precautions and maintenance, monitoring, and employee training measures; and Emergency response program that spells out emergency health care, employee training measures and procedures for informing the public and response agencies (e.g the fire department) should an accident occur.

Date of Government Version: 11/02/2020	Source: Environmental Protection Agency
Date Data Arrived at EDR: 11/12/2020	Telephone: 202-564-8600

## RAATS: RCRA Administrative Action Tracking System

RCRA Administration Action Tracking System. RAATS contains records based on enforcement actions issued under RCRA pertaining to major violators and includes administrative and civil actions brought by the EPA. For administration actions after September 30, 1995, data entry in the RAATS database was discontinued. EPA will retain a copy of the database for historical records. It was necessary to terminate RAATS because a decrease in agency resources made it impossible to continue to update the information contained in the database.

Date of Government Version: 04/17/1995	Source: EPA
Date Data Arrived at EDR: 07/03/1995	Telephone: 202-564-4104
Date Made Active in Reports: 08/07/1995	Last EDR Contact: 06/02/2008
Number of Days to Update: 35	Next Scheduled EDR Contact: 09/01/2008
	Data Release Frequency: No Update Planned

## PRP: Potentially Responsible Parties

A listing of verified Potentially Responsible Parties

Date of Government Version: 12/30/2020	Source: EPA
Date Data Arrived at EDR: 01/14/2021	Telephone: 202-564-6023
Date Made Active in Reports: 03/05/2021	Last EDR Contact: 05/03/2021
Number of Days to Update: 50	Next Scheduled EDR Contact: 08/16/2021
	Data Release Frequency: Quarterly

## PADS: PCB Activity Database System

PCB Activity Database. PADS Identifies generators, transporters, commercial storers and/or brokers and disposers of PCB's who are required to notify the EPA of such activities.

Date of Government Version: 11/19/2020	Source: EPA
Date Data Arrived at EDR: 01/08/2021	Telephone: 202-566-0500

## HIST FTTS: FIFRA/TSCA Tracking System Administrative Case Listing

A complete administrative case listing from the FIFRA/TSCA Tracking System (FTTS) for all ten EPA regions. The information was obtained from the National Compliance Database (NCDB). NCDB supports the implementation of FIFRA (Federal Insecticide, Fungicide, and Rodenticide Act) and TSCA (Toxic Substances Control Act). Some EPA regions are now closing out records. Because of that, and the fact that some EPA regions are not providing EPA Headquarters with updated records, it was decided to create a HIST FTTS database. It included records that may not be included in the newer FTTS database updates. This database is no longer updated.

Date of Government Version: 10/19/2006

## UMTRA: Uranium Mill Tailings Sites

Uranium ore was mined by private companies for federal government use in national defense programs. When the mills shut down, large piles of the sand-like material (mill tailings) remain after uranium has been extracted from the ore. Levels of human exposure to radioactive materials from the piles are low; however, in some cases tailings were used as construction materials before the potential health hazards of the tailings were recognized.

## US AIRS (AFS): Aerometric Information Retrieval System Facility Subsystem (AFS)

The database is a sub-system of Aerometric Information Retrieval System (AIRS). AFS contains compliance data on air pollution point sources regulated by the U.S. EPA and/or state and local air regulatory agencies. This information comes from source reports by various stationary sources of air pollution, such as electric power plants, steel mills, factories, and universities, and provides information about the air pollutants they produce. Action, air program, air program pollutant, and general level plant data. It is used to track emissions and compliance data from industrial plants.

## ABANDONED MINES: Abandoned Mines

An inventory of land and water impacted by past mining (primarily coal mining) is maintained by OSMRE to provide information needed to implement the Surface Mining Control and Reclamation Act of 1977 (SMCRA). The inventory contains information on the location, type, and extent of AML impacts, as well as, information on the cost associated with the reclamation of those problems. The inventory is based upon field surveys by State, Tribal, and OSMRE program officials. It is dynamic to the extent that it is modified as new problems are identified and existing problems are reclaimed.

## EDR HIGH RISK HISTORICAL RECORDS

### ***EDR Exclusive Records***

#### EDR MGP: EDR Proprietary Manufactured Gas Plants

The EDR Proprietary Manufactured Gas Plant Database includes records of coal gas plants (manufactured gas plants) compiled by EDR's researchers. Manufactured gas sites were used in the United States from the 1800's to 1950's to produce a gas that could be distributed and used as fuel. These plants used whale oil, rosin, coal, or a mixture of coal, oil, and water that also produced a significant amount of waste. Many of the byproducts of the gas production, such as coal tar (oily waste containing volatile and non-volatile chemicals), sludges, oils and other compounds are potentially hazardous to human health and the environment. The byproduct from this process was frequently disposed of directly at the plant site and can remain or spread slowly, serving as a continuous source of soil and groundwater contamination.

#### EDR Hist Auto: EDR Exclusive Historical Auto Stations

EDR has searched selected national collections of business directories and has collected listings of potential gas station/filling station/service station sites that were available to EDR researchers. EDR's review was limited to those categories of sources that might, in EDR's opinion, include gas station/filling station/service station establishments. The categories reviewed included, but were not limited to gas, gas station, gasoline station, filling station, auto, automobile repair, auto service station, service station, etc. This database falls within a category of information EDR classifies as "High Risk Historical Records", or HRHR. EDR's HRHR effort presents unique and sometimes proprietary data about past sites and operations that typically create environmental concerns, but may not show up in current government records searches.

## OTHER DATABASE(S)

Depending on the geographic area covered by this report, the data provided in these specialty databases may or may not be complete. For example, the existence of wetlands information data in a specific report does not mean that all wetlands in the area covered by the report are included. Moreover, the absence of any reported wetlands information does not necessarily mean that wetlands do not exist in the area covered by the report.

### CT MANIFEST: Hazardous Waste Manifest Data

Facility and manifest data. Manifest is a document that lists and tracks hazardous waste from the generator through transporters to a tsd facility.

Date of Government Version: 08/10/2020	Source: Department of Energy & Environmental Protection
Date Data Arrived at EDR: 10/20/2020	Telephone: 860-424-3375
Date Made Active in Reports: 11/02/2020	Last EDR Contact: 02/12/2021

**Sensitive Receptors:** There are individuals deemed sensitive receptors due to their fragile immune systems and special sensitivity to environmental discharges. These sensitive receptors typically include the elderly, the sick, and children. While the location of all sensitive receptors cannot be determined, EDR indicates those buildings and facilities - schools, daycares, hospitals, medical centers, and nursing homes - where individuals who are sensitive receptors are likely to be located.

### AHA Hospitals:

Source: American Hospital Association, Inc.  
Telephone: 312-280-5991

The database includes a listing of hospitals based on the American Hospital Association's annual survey of hospitals.

### Medical Centers: Provider of Services Listing

Source: Centers for Medicare & Medicaid Services  
Telephone: 410-786-3000

A listing of hospitals with Medicare provider number, produced by Centers of Medicare & Medicaid Services, a federal agency within the U.S. Department of Health and Human Services.

### Nursing Homes

Source: National Institutes of Health  
Telephone: 301-594-6248

Information on Medicare and Medicaid certified nursing homes in the United States.

### Public Schools

Source: National Center for Education Statistics  
Telephone: 202-502-7300

The National Center for Education Statistics' primary database on elementary and secondary public education in the United States. It is a comprehensive, annual, national statistical database of all public elementary and secondary schools and school districts, which contains data that are comparable across all states.

### Private Schools

Source: National Center for Education Statistics  
Telephone: 202-502-7300

The National Center for Education Statistics' primary database on private school locations in the United States.

## **GEOCHECK<sup>®</sup> - PHYSICAL SETTING SOURCE ADDENDUM**

### **TARGET PROPERTY ADDRESS**

BLUEGRASS  
5749 BRIAR HILL, RD  
LEXINGTON, KY 40516

### **TARGET PROPERTY COORDINATES**

Latitude (North):	38.077412 - 38° 4' 38.68"
Longitude (West):	84.323757 - 84° 19' 25.53"
Universal Tranverse Mercator:	Zone 16
UTM X (Meters):	734746.2
UTM Y (Meters):	4217581.0
Elevation:	958 ft. above sea level

### **USGS TOPOGRAPHIC MAP**

Target Property Map:	5939411 CLINTONVILLE, KY
Version Date:	2013

EDR's GeoCheck Physical Setting Source Addendum is provided to assist the environmental professional in forming an opinion about the impact of potential contaminant migration.

Assessment of the impact of contaminant migration generally has two principle investigative components:

1. Groundwater flow direction, and
2. Groundwater flow velocity.

Groundwater flow direction may be impacted by surface topography, hydrology, hydrogeology, characteristics of the soil, and nearby wells. Groundwater flow velocity is generally impacted by the nature of the geologic strata.

# GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

## GROUNDWATER FLOW DIRECTION INFORMATION

Groundwater flow direction for a particular site is best determined by a qualified environmental professional using site-specific well data. If such data is not reasonably ascertainable, it may be necessary to rely on other sources of information, such as surface topographic information, hydrologic information, hydrogeologic data collected on nearby properties, and regional groundwater flow information (from deep aquifers).

## TOPOGRAPHIC INFORMATION

Surface topography may be indicative of the direction of surficial groundwater flow. This information can be used to assist the environmental professional in forming an opinion about the impact of nearby contaminated properties or, should contamination exist on the target property, what downgradient sites might be impacted.

## TARGET PROPERTY TOPOGRAPHY

General Topographic Gradient: General SE

## SURROUNDING TOPOGRAPHY: ELEVATION PROFILES

Source: Topography has been determined from the USGS 7.5' Digital Elevation Model and should be evaluated on a relative (not an absolute) basis. Relative elevation information between sites of close proximity should be field verified.

# GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

## HYDROLOGIC INFORMATION

Surface water can act as a hydrologic barrier to groundwater flow. Such hydrologic information can be used to assist the environmental professional in forming an opinion about the impact of nearby contaminated properties or, should contamination exist on the target property, what downgradient sites might be impacted.

Refer to the Physical Setting Source Map following this summary for hydrologic information (major waterways and bodies of water).

## **FEMA FLOOD ZONE**

<u>Flood Plain Panel at Target Property</u>	<u>FEMA Source Type</u>
21017C0275C	FEMA FIRM Flood data
<u>Additional Panels in search area:</u>	<u>FEMA Source Type</u>
Not Reported	

## **NATIONAL WETLAND INVENTORY**

<u>NWI Quad at Target Property</u>	<u>NWI Electronic Data Coverage</u>
CLINTONVILLE	YES - refer to the Overview Map and Detail Map

## HYDROGEOLOGIC INFORMATION

Hydrogeologic information obtained by installation of wells on a specific site can often be an indicator of groundwater flow direction in the immediate area. Such hydrogeologic information can be used to assist the environmental professional in forming an opinion about the impact of nearby contaminated properties or, should contamination exist on the target property, what downgradient sites might be impacted.

## **AQUIFLOW®**

Search Radius: 1.000 Mile.

EDR has developed the AQUIFLOW Information System to provide data on the general direction of groundwater flow at specific points. EDR has reviewed reports submitted by environmental professionals to regulatory authorities at select sites and has extracted the date of the report, groundwater flow direction as determined hydrogeologically, and the depth to water table.

<u>MAP ID</u>	<u>LOCATION FROM TP</u>	<u>GENERAL DIRECTION GROUNDWATER FLOW</u>
Not Reported		

## GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

### GROUNDWATER FLOW VELOCITY INFORMATION

Groundwater flow velocity information for a particular site is best determined by a qualified environmental professional using site specific geologic and soil strata data. If such data are not reasonably ascertainable, it may be necessary to rely on other sources of information, including geologic age identification, rock stratigraphic unit and soil characteristics data collected on nearby properties and regional soil information. In general, contaminant plumes move more quickly through sandy-gravelly types of soils than silty-clayey types of soils.

### GEOLOGIC INFORMATION IN GENERAL AREA OF TARGET PROPERTY

Geologic information can be used by the environmental professional in forming an opinion about the relative speed at which contaminant migration may be occurring.

### Federal Area Radon Information for FAYETTE COUNTY, KY

Number of sites tested: 26

Area	Average Activity	% <4 pCi/L	% 4-20 pCi/L	% >20 pCi/L
Living Area - 1st Floor	4.946 pCi/L	58%	42%	0%
Living Area - 2nd Floor	Not Reported	Not Reported	Not Reported	Not Reported
Basement	7.176 pCi/L	48%	48%	4%

# PHYSICAL SETTING SOURCE RECORDS SEARCHED

## TOPOGRAPHIC INFORMATION

### USGS 7.5' Digital Elevation Model (DEM)

Source: United States Geologic Survey

EDR acquired the USGS 7.5' Digital Elevation Model in 2002 and updated it in 2006. The 7.5 minute DEM corresponds to the USGS 1:24,000- and 1:25,000-scale topographic quadrangle maps. The DEM provides elevation data with consistent elevation units and projection.

### Current USGS 7.5 Minute Topographic Map

Source: U.S. Geological Survey

## HYDROLOGIC INFORMATION

Flood Zone Data: This data was obtained from the Federal Emergency Management Agency (FEMA). It depicts 100-year and 500-year flood zones as defined by FEMA. It includes the National Flood Hazard Layer (NFHL) which incorporates Flood Insurance Rate Map (FIRM) data and Q3 data from FEMA in areas not covered by NFHL.

Source: FEMA

Telephone: 877-336-2627

Date of Government Version: 2003, 2015

NWI: National Wetlands Inventory. This data, available in select counties across the country, was obtained by EDR in 2002, 2005 and 2010 from the U.S. Fish and Wildlife Service.

### State Wetlands Data: Wetland Inventory

Source: Environmental & Public Protection Cabinet

Telephone: 502-564-6736

## HYDROGEOLOGIC INFORMATION

### AQUIFLOW<sup>R</sup> Information System

Source: EDR proprietary database of groundwater flow information

EDR has developed the AQUIFLOW Information System (AIS) to provide data on the general direction of groundwater flow at specific points. EDR has reviewed reports submitted to regulatory authorities at select sites and has extracted the date of the report, hydrogeologically determined groundwater flow direction and depth to water table information.

## GEOLOGIC INFORMATION

### Geologic Age and Rock Stratigraphic Unit

Source: P.G. Schruben, R.E. Arndt and W.J. Bawiec, Geology of the Conterminous U.S. at 1:2,500,000 Scale - A digital representation of the 1974 P.B. King and H.M. Beikman Map, USGS Digital Data Series DDS - 11 (1994).

### STATSGO: State Soil Geographic Database

Source: Department of Agriculture, Natural Resources Conservation Service (NRCS)

The U.S. Department of Agriculture's (USDA) Natural Resources Conservation Service (NRCS) leads the national Conservation Soil Survey (NCSS) and is responsible for collecting, storing, maintaining and distributing soil survey information for privately owned lands in the United States. A soil map in a soil survey is a representation of soil patterns in a landscape. Soil maps for STATSGO are compiled by generalizing more detailed (SSURGO) soil survey maps.

### SSURGO: Soil Survey Geographic Database

Source: Department of Agriculture, Natural Resources Conservation Service (NRCS)

Telephone: 800-672-5559

SSURGO is the most detailed level of mapping done by the Natural Resources Conservation Service, mapping scales generally range from 1:12,000 to 1:63,360. Field mapping methods using national standards are used to construct the soil maps in the Soil Survey Geographic (SSURGO) database. SSURGO digitizing duplicates the original soil survey maps. This level of mapping is designed for use by landowners, townships and county natural resource planning and management.

## LOCAL / REGIONAL WATER AGENCY RECORDS

### FEDERAL WATER WELLS

#### PWS: Public Water Systems

Source: EPA/Office of Drinking Water

Telephone: 202-564-3750

Public Water System data from the Federal Reporting Data System. A PWS is any water system which provides water to at least 25 people for at least 60 days annually. PWSs provide water from wells, rivers and other sources.

#### PWS ENF: Public Water Systems Violation and Enforcement Data

Source: EPA/Office of Drinking Water

Telephone: 202-564-3750

Violation and Enforcement data for Public Water Systems from the Safe Drinking Water Information System (SDWIS) after August 1995. Prior to August 1995, the data came from the Federal Reporting Data System (FRDS).

#### USGS Water Wells: USGS National Water Inventory System (NWIS)

This database contains descriptive information on sites where the USGS collects or has collected data on surface water and/or groundwater. The groundwater data includes information on wells, springs, and other sources of groundwater.

### STATE RECORDS

#### Kentucky Water Well Records Database

Source: Kentucky Geological Survey

Telephone: 859-257-5500

Water Wells in Kentucky. Data from the Kentucky Ground Water Data Repository.

## OTHER STATE DATABASE INFORMATION

#### Oil and Gas Well Locations

Source: Kentucky Geological Survey

Telephone: 859-257-5500

Oil and gas well locations in the state of Kentucky

### RADON

#### State Database: KY Radon

Source: Department of Public Health

Telephone: 502-564-4856

Radon Test Results

#### Area Radon Information

Source: USGS

Telephone: 703-356-4020

The National Radon Database has been developed by the U.S. Environmental Protection Agency (USEPA) and is a compilation of the EPA/State Residential Radon Survey and the National Residential Radon Survey. The study covers the years 1986 - 1992. Where necessary data has been supplemented by information collected at private sources such as universities and research institutions.

#### EPA Radon Zones

Source: EPA

Telephone: 703-356-4020

Sections 307 & 309 of IRAA directed EPA to list and identify areas of U.S. with the potential for elevated indoor radon levels.

### OTHER

#### Airport Landing Facilities: Private and public use landing facilities

Source: Federal Aviation Administration, 800-457-6656

#### Epicenters: World earthquake epicenters, Richter 5 or greater

Source: Department of Commerce, National Oceanic and Atmospheric Administration

Earthquake Fault Lines: The fault lines displayed on EDR's Topographic map are digitized quaternary faultlines, prepared in 1975 by the United State Geological Survey
