U.S. Army Environmental Command (USAEC) is seeking interest in establishing a Restoration Advisory Board (RAB) at the former Tarheel Army Missile Plant (TAMP), also known as the former Western Electric Site. A RAB is a structured forum for the community to get involved, exchange information and stay updated on the environmental restoration decision-making process.

RABs empower community members to play an active role in the environmental restoration process, while also encouraging sharing of important information with their wider community, fostering transparency and collective engagement.

More information will be presented at a TAMP RAB kick-off meeting, October 3, 2024, from 6 – 8:00 p.m. at the John Robert Kernodle Senior Center, 1535 S Mebane St, Burlington, NC 27215. This meeting, open to the public, provides an overview of the environmental restoration work at TAMP, the RAB development process, opportunities, and a timeline for RAB establishment.

USAEC encourages community members to get involved, share their insights, and help shape the solution. By participating in the process, you can be a positive force for progress.

A RAB that brings together diverse voices from the entire affected community fosters relationships and trust, creating a solid foundation for collaboration and shared success.

A successful and forward-moving public involvement program, like a RAB, thrives when all parties work together, minimizing delays and actively contributing to the progress of the project.
